Subject: Holtec Decommissioning International – Acceptance of Requested Action Re: Application for Order Consenting to Indirect License Transfer - L-2026-LLM-0006
Date: Monday, June 8, 2026 11:28:00 AM

Good morning Bill,

By letter dated May 14, 2026 (Agencywide Documents Access and Management System (ADAMS) Accession ML26134A394), Holtec Decommissioning International, LLC (HDI), on behalf of itself, Holtec Pilgrim, LLC, Holtec Indian Point 2, LLC, Holtec Indian Point 3, LLC, Oyster Creek Environmental Protection, LLC, and Holtec Big Rock Point, LLC), submitted a license transfer application requesting that the U.S. Nuclear Regulatory Commission (NRC) consent to the indirect transfer of control of the Pilgrim Nuclear Power Station, Indian Point Nuclear Generating Stations 1, 2, and 3, Oyster Creek Nuclear Generating Station, and Big Rock Point. The proposed transaction will transfer control of the applicants (but not HDI) to an independent fiduciary manager.

The purpose of this e-mail is to provide the results of the NRC staff's acceptance review of this license transfer request. The acceptance review was performed to determine whether the application contains sufficient technical information to allow the NRC staff to complete a detailed technical review. The acceptance review is also intended to identify any readily apparent deficiencies related to the characterization of the regulatory requirements or plant licensing basis.

Pursuant to Section 50.80, "Transfer of licenses," of Title 10 of the *Code of Federal Regulations* (10 CFR), no license for a production or utilization facility, or any right thereunder, shall be transferred, assigned, or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, unless the Commission gives its consent in writing.

The NRC staff has reviewed your application and concluded that it includes technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed license transfer in terms of regulatory requirements and the protection of public health and safety and the environment. Given the more limited scope and depth of the acceptance review compared to the detailed technical review, issues that affect the NRC staff's ability to complete the technical review may still be identified despite the acceptance review being deemed adequate. If additional information is needed, you will be notified by separate correspondence.

Based on that, the staff's initial resource estimate for this action, and your requested review schedule, our estimate for this review is 75 hours and 3.5 months. The NRC staff expects to complete the review by August 31, 2026.

If emergent complexities or challenges arise during the NRC staff's review that affect the initial forecasted completion date or result in significant changes to the estimated review hours, the reasons for those changes—along with updated estimates—will be communicated during routine interactions with the assigned project manager. These estimates are based on the NRC staff's initial review of the application and may change due to several factors, including requests for additional information, unanticipated

expansion of the review scope, hearing-related activities, or if the submittal is provided to the NRC in advance of or concurrently with industry program initiatives or pilot applications.

If you have any questions, please contact me,
Marlayna
