Subject: Natura Resources Quality Assurance Program Description

Enclosed is Natura Resources' Quality Assurance Program Description. The Program Description is being submitted as a topical report for Nuclear Regulatory Commission review and approval. The Program Description is the top-level policy document that establishes the quality assurance policy and assigns major functional responsibilities for licensing, construction, pre-operational, and eventual operational activities conducted by or for Natura related to its commercial and non-commercial Liquid-Fueled Molten Salt Reactor projects. Natura understands that the NRC will charge fees for the review of this topical report.

The Program Description is submitted as required by 10 Code of Federal Regulations Part 50.4(7), Quality assurance related submissions, and other applicable Part 50 regulations. The Natura Quality Assurance Program is consistent with Part 50 Appendix B and applicable industry consensus standards. In addition to supporting the research reactor being constructed for Abilene Christian University, the Natura Quality Assurance Program will support commercial deployments at the Texas A&M RELLIS campus and in the Permian basin.

If you have questions or need additional information, please contact Boyce Travis at boyce@naturaresources.com or me at ben@naturaresources.com.

Regards,

A handwritten signature in blue ink that reads "Benjamin Beasley".

Benjamin Beasley
Director of Licensing
