United States Nuclear Regulatory Commission
Washington, D. C. 20555

In the Matter of Eliminating Non Combustibility Requirement for Fire
Barrier. NRC Info Notice 99 176 8-13-99.

Commissioners:

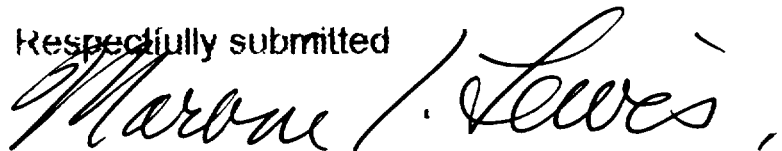

I have commented upon hundreds of NRC regulations. The NRC has changed a few to meet the omissions and commissions to which I have commented. This elimination of non-combustibility must be the most egregious and dangerous subsidy to the nuclear industry since the secretive and speedy ok that the Commission gave to TMI #2 to load fuel just before the accident there.

Just on its face, any fool can see that you do not use combustible materials to make a fire barrier. Any engineering analysis which would propose such a solution to the problem that combustible materials have been improperly used in fire barriers reeks of collusion with the perpetrators.

The NRC needs to act like a regulator and not a handmaiden to the regulated industry.

I wish that I could say,

Respectfully submitted

Marvin I. Lewis, R.P.E.
