TERMINATION DOCUMENTATION

1. License termination meets Type I criteria: Y N
- Licensee used sealed sources only and the most recent leak test demonstrates that they did not leak while in the licensee's possession
 - Licensee used radioactive material with $T_{1/2} \leq 60$ days and it has decayed to less than the activity in 10 CFR Part 20 Appendix C
2. License termination meets Type II criteria: Y N
- Licensee possessed and used only sealed sources but cannot demonstrate that the sources did not leak while in the licensee's possession
 - Licensee possessed unsealed radioactive material with $T_{1/2} \leq 60$ days but the maximum activity authorized under the license has not decayed to less than the quantity specified in 10 CFR Part 20, Appendix C
 - Licensee possessed unsealed radioactive material with $T_{1/2} > 60$ days but ≤ 120 days.
 - Licensee possessed ^{14}C or ^3H but the total activity(s) and use authorized under the license warrants decommissioning under Type II (describe rationale above)

**Attachment No. 2
Renewal Summary**

Lockheed Martin Corporation, Communications and Power Center (LM-CPC) hereby submits an Amendment Application for the purpose of adding two items to the license number 37-02006-09. The intent of this amendment is to consolidate the use of radioactive materials at both the Valley Forge and Newtown, Pennsylvania sites as part of the Communications and Power Center's operations. This amendment is also in conjunction with the closure of the Lockheed Martin Valley Forge license number 37-02006-05. The Radiation Safety Officer for the Valley Forge Site, Mr. Todd Williams, is coordinating the request to terminate license number 37-02006-05. Please reference control number 127073 regarding the closure of license number 37-02006-05.

LM-CPC requests that the thorium, which is currently listed on the LM-CPC SUB 831 license be transferred to license number 37-02006-09 and at the same time, requests termination of the SUB 831 license. The thorium machining performed at the LM-CPC site constitutes a small part of our radioactive materials use and the material is classed the same as the other radioactive material related to research and development.

LM-CPC also requests that the addition of byproduct material with atomic numbers 3 through 83 inclusive to the 37-02006-09 license. This request is specific to the testing of neutron irradiated electronic components which was originally listed on the 37-02006-05 license.

LM-CPC will require that the off-site laboratories performing neutron irradiation for LM-CPC electronic components hold the components for a minimum time of 24 hours post irradiation. The laboratories will perform gamma spectroscopy analysis after the 24 hour hold period to determine the radioisotopes present in the components. The isotopes identified must have half lives less than or equal 120 days, or they must be less than 1000 times the Appendix B, 10CFR 30 activities (the 1/r rule applies). The results of the gamma spectroscopy analysis shall be forwarded to the LM-CPC Radiation Safety Officer prior to shipment of the components back to Lockheed Martin.

The radioactive materials used at both the Newtown and Valley Forge sites will be under the control of the Radiation Safety Committee, a single Radiation Safety Officer, and one set of Standard Operating Procedures. The details of this requested License Amendment are enclosed.
