Frank,

This is more of a question than a comment. ANSI/ANS-3.5-1998 describes and requires "Verification Testing" in the software development process, and requires documentation of same. If a utility chooses to upgrade its program to conform to the 1998 standard, would it be required to demonstrate that it met the Verification Testing requirement over the entire life of the simulator software?

Regards,  
Bill Kriebel - Indian Point 2
