November 18, 1999

SUBJECT: H. B. ROBINSON STEAM ELECTRIC PLANT, UNIT NO. 2 (HBRSEP2) -
 CLOSEOUT OF GENERIC LETTER 97-06, "DEGRADATION OF STEAM
 GENERATOR INTERNALS" (TAC NO. MA0939)

Dear Mr. Young:

On December 31, 1997, the staff issued Generic Letter (GL) 97-06, "Degradation of Steam Generator Internals." The purpose of GL 97-06 was to obtain information that would enable the staff to verify that the condition of licensees' steam generator internals comply with and conform to the current licensing bases for their respective facilities.

By letters dated March 30, 1998, September 30, 1998, and December 14, 1998, you responded to GL 97-06. The staff's review of your response to the GL did not identify any new concerns with the condition of the steam generator internals. The staff did not identify any concerns with the inspection practices employed at your facility to detect degradation of steam generator internals. Therefore, the staff concludes that your responses to the GL provide reasonable assurance that the conditions of your steam generator internals are in compliance with the current licensing bases for your facility.

Therefore, we consider GL 97-06 closed for your facility. However, your activities related to the steam generator internals may be subject to NRC inspection.

The detailed technical basis that supports the staff's determination for all facilities will be published in a NUREG report. The expected publication date is December 1999.

If you have any questions regarding this matter, please contact Ram Subbaratnam at 415-1478.

Sincerely,
