

DOCKETED  
USNRC

November 18, 1999

NRC Chairman Richard Meserve  
US NRC  
Washington, DC 20555

'99 NOV 22 P3:35

OFFICE  
OF  
ADMINISTRATION

DOCKET NUMBER  
PROPOSED RULE **PR** 20  
(64FR35090)

Dear Chairman:

Once again the Public Citizen's Critical Mass Energy Project is trying to influence public policy by scaring the public. I have read the form letter they are encouraging people to send to the NRC concerning the rulemaking for the release of radioactive material for recycle and reuse. I completely disagree with the position of Public Citizen's Critical Mass Energy Project.

The use of nuclear materials was a key factor in securing and maintaining freedom for mankind in the years following World War Two. Nuclear power stations provide safe, reliable, clean electricity for our country. The use of nuclear material in manufacturing and medicine is vital to our economy and our health.

Don't let the Public Citizen's Critical Mass Energy Project campaign change what appears to be sound public policy in this rulemaking. Don't allow their standard delay tactics to cost us as a country more time and money in the implementation of a solution to the use of nuclear materials. Don't burden the medical, industrial, and electric generating industries in order to further study this issue. The Public Citizen's Critical Mass Energy Project will never be satisfied with your actions unless your actions abolish the use of all nuclear materials.

Base your decisions on what is scientifically and morally right for all people and not this loud, politically active special interest group.

Sincerely

*Joseph Amarello*
