Subject: RELEASE & RECYCLING OF RAD WASTE

NOV 30 10:13

Dear NRC:

I am writing to express the strongest possible objection to the plan under review to release "low-level" radioactive waste into various streams of non-hazardous waste and raw materials for processing into consumer items. The human propensity to take shortcuts, especially when monetary interests are involved, will lead to situations in which radioactive material WILL imperil human and environmental health.

DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

The nuclear power industry has been a multibillion-dollar boondoggle on the American public. What once was predicted to be "too cheap to meter" has turned out to be totally nonviable as a source of power without massive public subsidies. There is still no satisfactory solution to the waste disposal problem, so now we are being asked (or is it "told") to accept release of supposedly low-level waste into our living environments? Please, NO.
