

To the Secretary -

As you must be painfully aware of already, no dose of radiation, no matter how small, is a "safe" dose.

Do not willfully undermine the health and safety of the American people by allowing the recycling of contaminated metals into consumer products of any nature!

Unless you are prepared to undergo the extensive research necessary to safeguard the public before such a ridiculous decision is made, put a stop to this irresponsible plan. Disposal of radioactive wastes does not include circulating them throughout the community.

You have a solemn responsibility to me, my family, and my nation. Do not disgrace yourself and put my children, and yours, in jeopardy!

Yours,
Jesse Gallagher
