DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

'99 DEC -7 P3:04

Open letter to the Secretary, US Nuclear Regulatory Commission, Washington, DC 20555. Attention: Rulemaking and Adjudication Staff.

I understand that you are preparing to set standards to legalize the large-scale release of radioactive waste to be recycled into consumer products. It is true then, that the Gods smite those they wish to destroy with blindness! How could anyone think of such a thing? Will you require an environmental impact report first, will you do a damage assessment in numbers of likely new cancer cases? Will you require FDA testing first? Will you have zippers, baby carriages, frying pans labeled as "no radiacs", "low radiacs" etc? I suppose you'll claim the level of radiation will be so low there is no point in my buying a Geiger counter?
