

DOCKET NUMBER
PROPOSED RULE PR 20
(64FR35090)

DOCKETED
USNRC
12-5-99
DEC 13 10:24 '99

Secretary
U.S. Nuclear Regulatory Commission
Washington DC 20555

Office of
Adjudication

Attn: Rulemaking and Adjudications Staff

Gentlemen:

The recycling of radioactive metal is not acceptable. Not being a nuclear physicist, I can't begin to help you eliminate the problem; but I have heard there is a machine or treatment that negates the radiation through the process of fusion. That is what would correct the situation.

Radioactive metals are just one aspect. The hole in the ozone, the disappearance of frogs or the break in the food chain; all the threats to the environment not to mention the threat to human life.

I'm not sure how Madame Curie or her father died but Karen Silkwood I knew was murdered.

Secretary, NRC

Because of her exposure to high radiation. Don't let that happen. No dose is acceptable. Fusion is the solution.

Sincerely,
Kita Collins
