DOCKET NUMBER
PROPOSED RULE **PR** 20
(64FR35090)

DOCKETED
IN NRC

(244)

Dec. 13, 1999

Dear Chairman Meserve: '99 DEC 16 AM 1:45

I am asking the Nuclear Regulatory Commission to end the recycling of radioactive waste into consumer products. Please isolate these materials and any and everything they contaminate! The radioactive leftovers from atomic energy and weapons producing must not be dumped on the public!

This is a totally dangerous proposition! It creates great risks, which can be avoided - consumers, producers and raw materials industries don't want this! Naturally occurring radiation is unavoidable but there's no justification for additional exposures to radiation that the NRC is planning to allow in everyday products!

This issue needs full public debate in order to fully examine the problems - too important for taking hasty actions.

Please let the NRC extend the comment period until September 2000 on the issue of allowing radioactive waste in the marketplace! It is appalling that you are considering contaminating people + living beings in this fashion!

Thank you.

Sincerely,

Cordelia Fisher
