DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

DOCKETED
USNRC

December 5, 1999

'99 DEC 20 P3:19

Secretary
U. S. Nuclear Regulatory Commission
Washington, DC 20555

OFFICE OF
REGULATORY
ADJUDICATION STAFF

Attention: Rule Making and Adjuications Staff

I cannot believe that the NRC is planning to set standards to legalize the large scale use of radioactive waste by recycling it into consumer products.

What can you be thinking? Is this about money? Is this because we have no more space to store this material responsibly? Whatever the reasons, there must be a better way than introducing more nuclear contamination among our citizens.

Having had thyroid cancer, it was necessary to take radioactive isotopes. No one could come into my room or be housed in the rooms on either side of me. Everything in the room had to be protected from my touch. This stuff must be horrific. Do we really have to buy products that will possibly build up and cause mutations, death or lingering illnesses. I realize I'm not being very scientific right now - just passionate about the terrible possibilities.

Do we really know enough to legalize the use of this STUFF for use by the general public. Imagine how this may compound now that we are introducing irradiated foods for ingestion. Please THINK, THINK, THINK!

Thank you for your attention,

Donna Lee Herold

I'm a little, old lady who won't have to face these consequences, but my children and yours most certainly will. Lets spend some money on making radioactive waste harmless. If we can get to the moon, we can do it.
