SUBJECT: SUMMARY OF THE APRIL 18, 2000, MEETING HELD WITH THE
WESTINGHOUSE OWNERS GROUP TO DISCUSS REACTOR
VESSEL INTERNALS ISSUES

On April 18, 2000, representatives of the Westinghouse Owners Group (WOG) met with the NRC staff to discuss various reactor vessel internals issues. Attachment 1 is a list of meeting attendees. Copies of the slides used during the meeting are available under ADAMS accession number ML003706451.

The major issue of the meeting was the WOG aging management report on reactor vessel (RV) internals (WCAP-14577). The meeting started with a discussion of the WOG baffle barrel bolting (B³) program status. The WOG discussed the results of UT inspections that have occurred and explained that based on their results they would like to treat baffle bolt degradation as a potential aging management issue for license renewal. The WOG stated that they would submit a report with the results of the testing. The next issue discussed was materials reliability program (MRP) reactor internals issue task group/joint baffle barrel (JoBB) update. The WOG discussed the various strategies to be used for reactor internals/JoBB aging degradation program along with the tasks that need to be completed and a schedule for the various tasks. The last part of the meeting dealt with the WOG responses to requests for additional information related to WCAP-14577, "Reactor Vessel Internals." The WOG concluded that their responses to the staff's questions should be sufficient for the staff to complete a safety evaluation without the need to update the topical report.
