**STATEMENT OF WORK FOR UNIVERSITY OF WISCONSIN
PURCHASE ORDER NO. 60-080004**

TITLE: Technical Support for Molten Fuel Coolant Interactions Research

I. BACKGROUND

The University of Wisconsin (UW) is completing an Office of Research (RES) funded contract on fuel-coolant interaction (FCI) research, which has provided experimental data to determine the enveloping conditions for occurrence of an energetic FCI and to estimate the energetics. The data has been used to develop and assess analytical models in the FCI codes. The codes are generally considered "fit-for-purpose" for some applications; however, for other applications (e.g., estimate of shock loading of the lower head, localized damage of cavity structures, etc.), better code accuracy and predictability are demanded. To meet the demand, it is necessary to have better measurements of spatial and temporal distributions of coarse breakup and fine fragmentation. Once developed, the successful measurement technique can be applied to other experimental programs on FCI and debris coolability.

II. OBJECTIVE

The objective of this work is to provide technical support in the development of instrumentation for measuring fuel-coolant mixing in order to better quantify coarse breakup and fine fragmentation. This type of quantification is necessary to achieve better predictability of analytical tools for fuel-coolant interactions calculations.

III. TECHNICAL AND OTHER QUALIFICATIONS REQUIRED

For successful performance of the work, the Principal Investigator should be an individual with qualifications and experience in FCI and related research areas. This individual should also have experience in directing experimental research and should have access to a team of research professionals and students.

IV. SCOPE OF WORK

Perform experiments with simulants at the WFCI facility to verify the capability of X-ray imaging technique to map the fuel-coolant mixing regions, to extract quantitative data from the maps, and to correlate the data for characterizing coarse breakup and fine fragmentation. Once the imaging capability is verified with simulants, provide necessary technical assistance to other organizations involved in FCI experimental research in the application of the technology to prototypic materials. When called upon, provide expert assistance on other FCI-related issues to the NRC staff.

V. LEVEL OF EFFORT

The estimated level of effort is approximately six person-months total.

PO 60-080004 (cont'd)

VI. PERIOD OF PERFORMANCE

This purchase order is for a period of twelve months.

VII. MEETINGS AND TRAVEL

At present, no travel (domestic or foreign) is anticipated. If it is found that travel is required to perform a specific assignment, it shall be coordinated with and approved in advance by the NRC Project Officer.

VIII. NRC FURNISHED MATERIAL

None required.

IX. DELIVERABLES AND SCHEDULE

The contractor shall submit a topical report at the conclusion of work, summarizing the results. Additionally, the contractor shall submit periodic progress reports accompanying each invoice. The progress reports will summarize technical progress made to date and provide a detailed explanation of expenses incurred.

X. NRC PROJECT OFFICER

The NRC Project Officer is Sudhamay Basu, (301)415-6774, mail stop T-10 K8.

Justification For Other Than Full and Open Competition

The U.S. Nuclear Regulatory Commission (NRC) proposes to enter into a Sole Source contract entitled "Technical Support for Molten Fuel Coolant Interactions Research," with the University of Wisconsin for the services of Professor Michael Corradini and his research team. The period of performance for this project is 12 months at an estimated cost of \$30,000.

The authority permitting non-competitive procurement is FAR Subpart 13.106-1(2)(b), which provides for limiting competition in situations where the Contracting Officer determines that only one source is reasonably available.

The University of Wisconsin (UW) is completing an Office of Research (RES) funded contract on fuel-coolant interaction (FCI) research, NRC-04-94-036, which has provided experimental data to determine the enveloping conditions for occurrence of an energetic FCI and to estimate the energetics. The data has been used to develop and assess analytical models in the FCI codes. The codes are generally considered "fit-for-purpose" for some applications; however, for other applications (e.g., estimate of shock loading of the lower head, localized damage of cavity structures, etc.), better code accuracy and predictability are demanded. To meet the demand, it is necessary to have better measurements of spatial and temporal distributions of coarse breakup and fine fragmentation. Once developed, the successful measurement technique can be applied to other experimental programs on FCI and debris coolability. This work, estimated to cost approximately \$30K is best placed with the University of Wisconsin.

The Principal Investigator, Professor Michael Corradini, is an internationally recognized authority on FCI, and has provided his expertise in the resolution of the alpha-mode failure issue, and continues to work toward resolution of other FCI issues. In recent times, he has been providing technical expertise to the FARO/KROTOS international cooperative program on FCI. In particular, his research team has been developing new techniques for measuring fuel-coolant mixing behavior that is essential in the development of improved analytical tools.

Continued technical support of Professor Corradini and his research team will be necessary to resolve residual technical issues in FCI and to maintain core capabilities in this area. The research team is well qualified to do this work by virtue of their vast experience. If NRC were to have the work performed elsewhere, it would take many months and thousands of dollars to get another contractor to the same place where Dr. Corradini and his research team are now. Therefore, it would be most advantageous to the government to use the University of Wisconsin for this work.

Based upon the above justification, only one source is reasonably available to provide NRC with the technical assistance required. The cost is considered fair and reasonable because the same rate is charged to their most favored customer.

Approved: In accordance with FAR 5.201, a notice of intent was published in the Commerce Business Daily on December 10, 1999, and no responses were received.

Sharon D. Stewart, Contracting Officer

SOL REQ.60080004

POC Contact: Yvette Brown, Contract Specialist, 301/415-6507

DESC: The U.S. Nuclear Regulatory Commission intends to enter into a sole source purchase order with the University of Wisconsin for technical assistance in the continued development of instrumentation for measuring fuel-coolant mixing in order to better quantify coarse breakup and fine fragmentation. This type of quantification is necessary to achieve better predictability of analytical tools for fuel-coolant interactions calculations. The University of Wisconsin has provided research in this area under NRC-04-94-036 for the past five years. The primary reason for selecting the University of Wisconsin is for continuity of technical support to resolve residual technical issues in fuel-coolant interaction and to maintain core capabilities in this area. The period of performance will be for twelve months from purchase order award. A request for quotation does not exist. Interested respondents must submit a written capability statement, to the address listed above, including technical information sufficient to demonstrating their ability to provide this technical assistance. Telephonic responses will not be considered. Responses providing insufficient information for evaluation will also not be considered.

Numbered Notes

[CBDNet](#)[Simple-Search](#)[Fielded-Search](#)[Extract](#)[Browse](#)[Search-Help](#)

Numbered Notes are Footnotes. The purpose of the Numbered Notes is to eliminate the unnecessary duplication of information that appears in various announcements. If a Numbered Note is included in the description of a notice, the note referred to must be read as part of the item.

When the note(s) applies to a synopsis, the contracting official should reference the note at the end of item 17 in the synopsis e.g., "See Note(s) 22 and 23".

1. The proposed contract is 100% set aside for small business concerns.
2. A portion of the acquisition is set aside for small business concerns.
3. The proposed contract is a labor surplus area set-aside. (This note is deleted as of 7/21/99.)
4. The proposed contract is 100 percent set aside for small disadvantaged business concerns (SDB). Offers from concerns other than SDBs will not be considered. (This note is deleted as of 11/24/99.)
5. The proposed contract is 100% set aside for Historically Black Colleges and Universities (HBCUs) and Minority Institutions (MIs). Offers from other than HBCUs and MIs will not be considered.
6. The proposed contract is a total small disadvantaged business set aside or is being considered as a total small disadvantaged business set aside. (This note is deleted as of 11/24/99.)
7. The proposed contract is 100% set aside for Historically Black Colleges, Universities and Minority Institutions or is partially set aside for Historically Black Colleges, Universities and Minority Institutions.
8. The solicitation document contains information that has been designated as "Militarily Critical Technical Data." Only businesses that have been certified by the Department of Defense, United States/Canada Joint Certification Office, and have a valid requirement may have a copy of the solicitation document. All requests for copies of the solicitation document must include a certified copy of DD Form 2345, Militarily Critical Technical Data Agreement. To obtain certification, contact: Commander, Defense Logistics Information Service (DLIS), ATTN: U.S./Canada Joint Certification Office, 74 Washington Avenue North, Battle Creek, MI 49017-3084 or call the DLIS at (800)-352-3572. The DLIS Unites States/Canada Joint Certification Lookup service is available via the Internet at: <http://www.dlis.dla.mil/ccal/>.
9. Interested parties may obtain copies of Military and Federal Specifications and Standards, Qualified

Product Lists, Military Handbooks, and other standardization documents from the DoD Single Stock Point (DODSSP), in Philadelphia, PA. Most documents are available in Adobe PDF format from the ASSIST database via the Internet at <http://assist.daps.mil>.

Users may search for documents using the ASSIST-Quick Search and, in most cases, download the documents directly via the Internet using standard browser software.

Documents not available for downloading from ASSIST can be ordered from the DODSSP using the ASSIST Shopping Wizard, after establishing a DODSSP Customer Account by following the registration procedures or by phoning the DoDSSP Special Assistance Desk at (215) 697-2179 (DSN: 442-2179).

Users not having access to the Internet may contact the DODSSP Special Assistance Desk at (215) 697-2179 (DSN: 442-2179) or mail requests to the DODSSP, Bldg. 4/D, 700 Robbins Avenue, Philadelphia, PA 19111-5094. Patterns, Drawings, Deviations Lists, Purchase Descriptions, etc., are not stocked at the DODSSP.

10-11. Reserved.

12. One or more of the items under this acquisition may be subject to an Agreement on Government Procurement approved and implemented in the United States by the Trade Agreements Act of 1979. All offers shall be in the English language and in U.S. dollars. All interested suppliers may submit an offer.

13. The proposed contract is restricted to domestic sources under the authority of FAR 6.302-3. Accordingly, foreign sources, except Canadian sources, are not eligible for award.

14-21. Reserved

22. The proposed contract action is for supplies or services for which the Government intends to solicit and negotiate with only one source under the authority of FAR 6.302. Interested persons may identify their interest and capability to respond to the requirement or submit proposals. This notice of intent is not a request for competitive proposals. However, all proposals received within forty-five days (thirty days if award is issued under an existing basic ordering agreement) after date of publication of this synopsis will be considered by the Government. A determination by the Government not to compete with this proposed contract based upon responses to this notice is solely within the discretion of the Government. Information received will normally be considered solely for the purpose of determining whether to conduct a competitive procurement.

23. Award will be made only if the offeror, the product/service or the manufacturer meets qualification requirement at time of award, in accordance with FAR clause 52.209-1 or 52.209-2. The solicitation identifies the office where additional information can be obtained concerning qualification requirements and is cited in each individual solicitation.

24. Architect-Engineer firms which meet the requirements described in this announcement are invited to submit: (1) a Standard Form 254, Architect-Engineer and Related Services Questionnaire, (2) a Standard Form 255, Architect-Engineer and Related Services Questionnaire for Specific Project, when requested, and (3) any requested supplemental data to the procurement office shown. Firms having a current Standard Form 254 on file with the procurement office shown are not required to register this form. Firms desiring to register for consideration for future projects administered by the procurement office (subject to specific requirements for individual projects) are encouraged to submit annually, a statement of qualifications and performance data, utilizing Standard Form 254, Architect-Engineer and Related Services Questionnaire. Firms responding to this announcement before the closing date will be considered for selection, subject to any limitations indicated with respect to size and geographic location of firm, specialized technical expertise or other requirements listed. Following an initial evaluation of the qualification and performance data submitted, three or more firms that are considered to be the most highly qualified to provide the type of services required, will be chosen for negotiation. Selection of firms for negotiation shall be made through an order of preference based on demonstrated competence

Subject: Sole Source Approval and CBD Notice of Intent

Attached for your review and approval is the stament of work, sole source justification, and CBD notice of intent to award a sole source purchase order for requisition 60080004 with the University of Wisconsin.

From: Sudhamay Basu
To: Yvette Brown
Date: Wed, Dec 8, 1999 1:55 PM
Subject: Re: Requisition 60080004 for Technical Assistance from Univ. of Wisconsin

I left you a voice mail message earlier today in response to your e-mail. Not sure if you retrieved that voice message. In answer to your question, the work could not have been completed under 04-94-036 because the latter ran its full course. I was told that DCPM guidelines do not allow a commercial contract of this nature to run beyond a 5-year limit. You should contact Marianne Riggs if you have additional questions of contractual nature on this procurement.

>>> Yvette Brown 12/08 8:18 AM >>>

I will be processing the subject requisition. However, I need to know why this work could not have been completed under the contract 04-94-036?

[Faint handwritten notes and signatures are visible in this section, including the word "Transmitted" and various initials.]

From: Yvette Brown
To: Sudhamay Basu
Subject: Re: Req. 60080004 for University of Wisconsin

I will see how fast he can get his proposal and quote back to me. Since this is a sole source and he has been performing the work it should not take long.

>>> Sudhamay Basu 01/03 1:26 PM >>>

The telephone number is 608 265 2001. Are you planning to get a quote on the phone? Doesn't the contractor need to submit a proposal for evaluation? In this case, does the contractor have time to do so and will the NRC have time to evaluate the proposal for award by 1/10/2000?

>>> Yvette Brown 01/03 1:19 PM >>>

The subject requisition is due for award 1/10/2000, can you please give me a telephone number for Professor Corradini so that I can send him a request for quote for the subject requirement.

Thanks,

Yvette

UW Proposal # 8903

The attached application has been administratively approved on behalf of the Board of Regents of the University of Wisconsin System and is submitted for your consideration. Please keep our office advised as developments occur with regard to this application.

We ask that you use the University's above-referenced proposal number in any future correspondence. Questions regarding administrative or contractual matters should be directed to Cheryl Gest (608) 262-4880. Questions regarding the technical nature of this application, should be directed to the Principal Investigator.

Proposal from University of Wisconsin

TECHNICAL SUPPORT FOR MOLTEN FUEL COOLANT INTERACTIONS RESEARCH

BACKGROUND

The University of Wisconsin (UW) is completing an NRC Office of Research (RES) funded contract on fuel-coolant interaction (FCI) research, which has provided experimental data to determine the enveloping conditions for occurrence of an energetic FCI and to estimate the energetics. The data has been used to develop and assess analytical models in the FCI codes. The codes are generally considered "fit-for-purpose" for some applications; however, for other applications (e.g., estimate of shock loading of the lower head, localized damage of cavity structures, etc.), better code accuracy and predictability are demanded. To meet the demand, it is necessary to have better measurements of spatial and temporal distributions of coarse breakup and fine fragmentation. Once developed, the successful measurement technique can be applied to other experimental programs on FCI and debris coolability. The measurement technique can also be used to investigate the effects of fuel composition changes; i.e., effects of high burn-up fuel compositions.

TECHNICAL OBJECTIVE

The objective of this work is to provide technical support in the development of instrumentation for measuring fuel-coolant mixing in order to better quantify coarse breakup and fine fragmentation. This type of quantification is necessary to achieve better predictability of analytical tools for fuel-coolant interactions calculations.

SCOPE OF WORK

We propose to perform experiments with simulants at the WFCI facility to verify the capability of X-ray imaging technique to map the fuel-coolant mixing regions, to extract quantitative data from the maps, and to correlate the data for characterizing coarse breakup and fine fragmentation. Once the imaging capability is verified with simulants, provide necessary technical assistance to other organizations involved in FCI experimental research in the application of the technology to prototypic materials. When called upon, provide expert assistance on other FCI-related issues to the NRC staff. This technical assistance may be of particular importance to consider the effects of high burn-up fuels.

LEVEL OF EFFORT AND PERIOD OF PERFORMANCE

The estimated level of effort is approximately six person-months total. This purchase order is for a period of twelve months.

MEETINGS AND TRAVEL

At present, no travel (domestic or foreign) is anticipated. If it is found that travel is required to perform a specific assignment, it shall be coordinated with and approved in advance by the NRC Project Officer.

DELIVERABLES AND SCHEDULE

The contractor shall submit a topical report at the conclusion of work, summarizing the results. Additionally, the contractor shall submit periodic progress reports accompanying each invoice. The progress reports will summarize technical progress made to date and provide a detailed explanation of expenses incurred.
