David L. Meyer,
Chief Rules and Directives Branch, Office of Administration

The NRC must not release any radioactive soil! Too many people (including a rise in children cases) are developing cancers already. We do not need to feed the fire.

The general public (if they were all aware of the possibility of this taking effect) would strongly oppose any radioactively contaminated soil being used in their homes or neighborhoods. Radioactively contaminated soil should be kept out of citizen's back yards and off children's playgrounds!

Thank you for your time.
