Dear Nuclear Regulatory Commission, November 16, 2000

We are deeply disturbed by this proposal to introduce "low-level" contaminated soils into home landscaping projects, athletic fields, and playgrounds. That both humans and other creatures would be interacting with this soil is completely unacceptable and irresponsible.

The fact that you are forced to look for such dangerous means of disposing of such bi-products says two things. It first demonstrates the immensity of toxic bi-products that this process creates and it secondly illustrates the nearsightedness of the choice of using nuclear power plants to supply energy demands.

We implore you, as fellow human beings and inhabitants of this earth to reconsider this proposal and begin looking for both an alternative in your "realistic reuse scenarios" and an alternative to nuclear power plants.

Sincerely,

Erin Pratt and

Alice Pratt
