Dear David L. Meyer:

The deregulation of radioactive materials and wastes from regulatory control will allow the recycling of radioactive waste materials into daily commerce as if they were not contaminated. I urge the US Nuclear Regulatory Commission (NRC) of ruling this action out.

Radioactive soils should NOT BE RELEASED or recycled in any way-they should be isolated from the public and the environment. This is our future, and our children do not deserve to be left with the legacy of a contaminated environment.

Sincerely,
Kathy Kane
