Subject: NRC Contaminated Soil

65 FR 44843
7-19-00
(42)

Dear NRC:

Regarding a recently announced plan that would allow the use of radiologically contaminated soils for farming, landscaping, athletic fields, etc., it would be completely irresponsible of the government to allow such use of radioactive soils for *any* such use where this soil could come intact with food production, animals and people. The government should urge instead moving towards non-nuclear sources of power generation, and ultimately shut down nuclear power plants altogether as there is seems to be *no* way to safely dispose of by-products.

Thank you for considering this request.
