

### **Outline Comments for the 2011 DAEC Exam**

- 1) General Comment: Comments were provided on 3 of the 4 scenario outlines submitted which needed to be addressed, if used, because the “bean” count could be affected. **At the OV, 2 scenarios (3 and 4) were selected for use in the exam due to their discrimination value and “bean” counts. The remaining scenarios were returned to the licensee.**
- 2) Scenario 1: **Comments were not addressed because the scenario was not utilized in the examination.**
- 3) Scenario 2: **Comments were not addressed because the scenario was not utilized in the examination.**
- 4) Scenario 3:
  - a. Event 5: What are the critical Operator actions? This may only be a Tech Spec call for the SRO. **This was evaluated and found to be acceptable at the OV (In addition to the Tech Spec call, there were AOP actions required by the operators)**
  - b. Event 6: Is this a water leak or a steam leak? I’m pretty sure it’s steam based on the critical tasks. **This was clarified on the Form ES-D1 to be a steam leak.**
