The Honorable Ralph M. Hall
Chairman, Subcommittee on Energy and Air Quality
Committee on Energy and Commerce
United States House of Representatives
Washington, DC 20515

Dear Mr. Chairman:

Enclosed for your information is the *Federal Register* notice for a proposed rule amending 10 CFR Parts 19, 20, and 50. The Nuclear Regulatory Commission (NRC) has sent to the Office of the Federal Register the enclosed *Federal Register* notice proposing to amend the requirements for the annual reporting of dose to workers, the definition of the quantity total effective dose equivalent (TEDE), the labeling of containers holding licensed material, and attempting to determine a worker's lifetime dose.

In § 19.13(b) the reporting of annual doses to workers would be limited to those whose annual dose exceeds the dose threshold for providing instructions to workers. This would result in the elimination of an unnecessary reporting burden. In §§ 20.1003 and 50.02 the definition of TEDE would be revised to improve clarity in the regulations. Under the revision to § 20.1905, nuclear power licensees would not be required to label containers holding licensed material located in a posted area, if they are conspicuously marked and their accessibility is limited. Finally, the requirement in § 20.2104(a) that licensees attempt to obtain the records of a worker's lifetime dose would be removed except in specific circumstances.

These revisions reduce administrative and paperwork burdens on NRC licensees without affecting the level of protection to the health and safety of workers and the public.

Sincerely,

Rebecca L. Schmidt, Director
Office of Congressional Affairs
