Thanks Dan.

I know that some of you are also developing or have developed lists of short term and long term items for us to request of the licensee. I will schedule a meeting for early next week so that we can finalize a consolidated list prior to the 13th. Also, let's pls consider including the question below from Pat in our set of questions. Thanks to all of you for your support, I really appreciate it!

Subject: Followup Questions for NA

On page 37 (Seismic Margin) of the slides used by Dominion at the September 8 public meeting it states in the 2nd bullet: "With few exceptions, components evaluated could withstand 0.3g or higher".

Question: What are the components that make up the "exceptions" that could not withstand a 0.3 g seismic event?

Gentlemen,

Here is my preliminary list, Black could be done by the Region, Red should be done by the licensee (and the Region if they choose).

Please, let me know what do you think?

Thanks,

Dan
