US Nuclear Regulatory Commission

Anthony R. Pietrangelo, Director
Risk and Performance-Based Regulation
Nuclear Energy Institute

Harold Ray
Executive Vice President Generation
Southern California Edison

Technical Specification Initiatives

Session W15 Subtopics

- Maintaining the Improved Standard Technical Specifications
- Consolidated Line Item Improvements
- Risk Management Technical Specification Initiatives

Maintaining the Improved Standard Technical Specifications

Over half the units are now operating with iSTS and approximately 75% are expected to eventually adopt them.

Revision 2 of the iSTS issued incorporating continuing improvements over the past 5 years.

Continuing maintenance of the iSTS competes for limited staff and industry resources with other to major activities such as the risk informed initiatives.

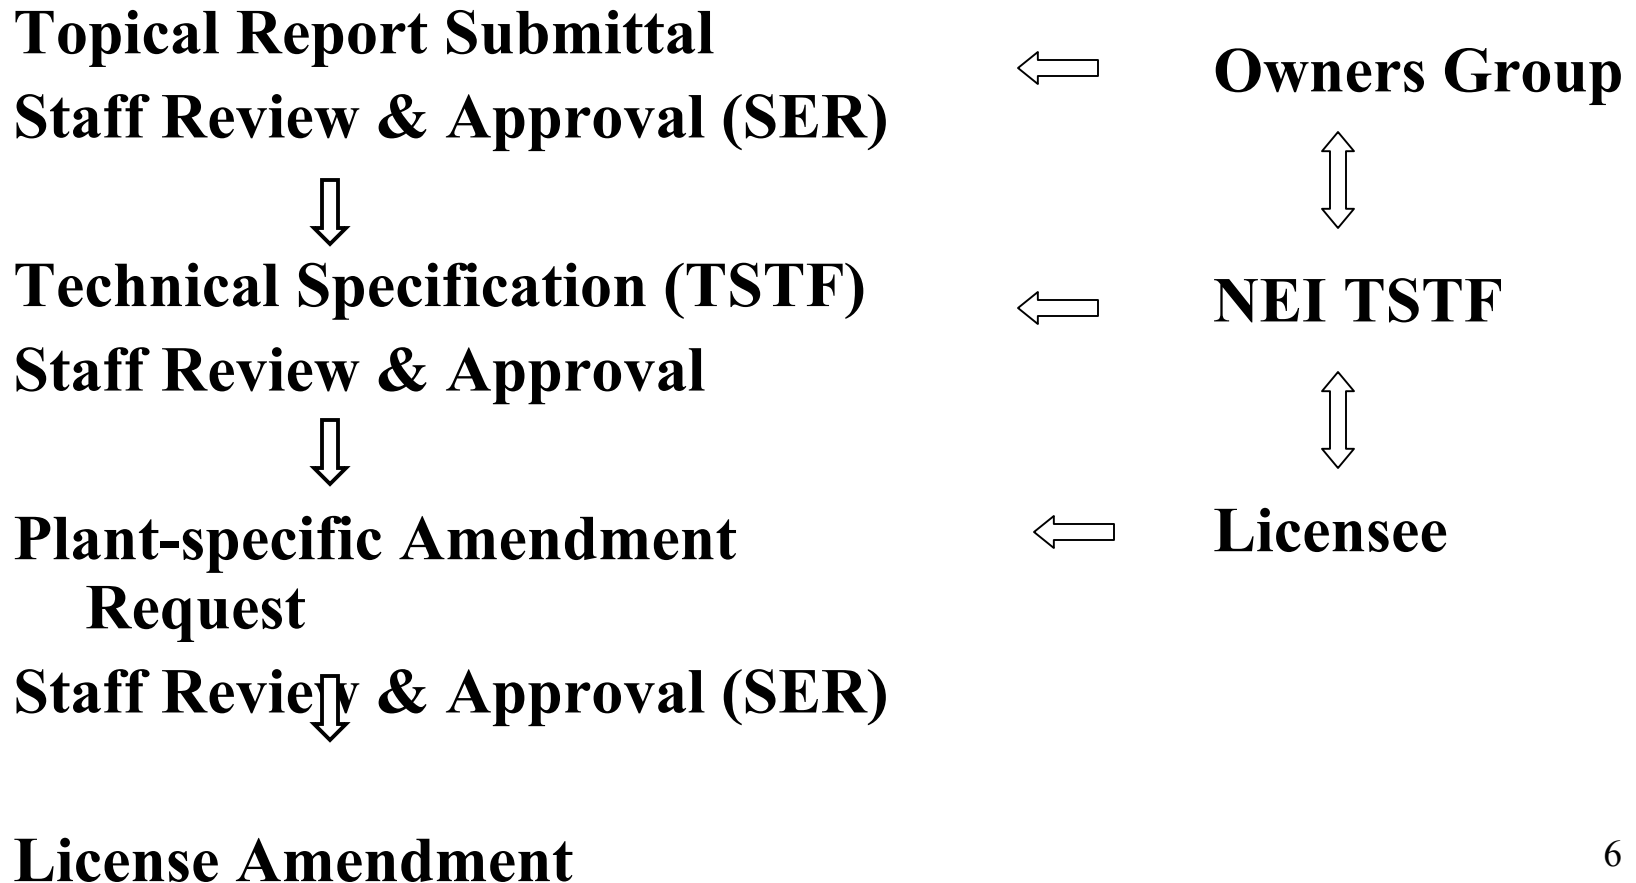

Maintaining the Improved Standard Technical Specifications

What should the criteria be for revising the iSTS model technical specifications?

Can a more efficient process be developed for maintaining the iSTS?

What should be the criteria for use of the Consolidated Line Item Improvement Process (CLIIP) to allow efficient plant-specific adoption of changes?

Generic Technical Specification Change Process

Consolidated Line Item Improvement Process (CLIIP)
