

RIC 2003

Emergent Technical Issues

Session T2

Regulatory Processes for Emergent Issues

Brian W. Sheron
Associate Director for Project Licensing
and Technical Analysis
Office of Nuclear Reactor Regulation
April 17, 2003

Recent Agency Communications on Material Issues

- **Steam Generator Tube Issues**
 - IN 2002-02, Supp. 1; Experience with plugged SG tubes
 - IN 2002-21; Degradation of thermally treated Alloy 600 SG tubing
 - Draft Generic Communication on SG tubesheet inspections

Recent Agency Communications on Material Issues (cont.)

- **Reactor Pressure Vessel Issues**
 - Bulletin 2001-01; Inspect RPV penetrations
 - Bulletin 2002-01; Davis-Besse experience
 - Bulletin 2002-02; Supplemental Inspection information and techniques
 - 2-11-03 Order; Established interim inspection requirements

Future Agency/Industry Actions

- Over past several years, the NRC has had to take regulatory actions via generic communications to assure plant safety.
- Future agency actions will depend on extent industry proactively addresses issues in a timely manner.
- Without timely industry initiatives to address emergent issues, the NRC will likely continue to use generic communications (e.g., GLs, Bulletins, Orders) to ensure adequate protection of public health and safety.
