

Ms. Amy Hull is a materials engineer in the Corrosion & Metallurgy Branch, Materials Engineering Directorate, Division of Fuel, Engineering, & Radiological Research in the Office of Nuclear Regulatory Research (CMB/ME/DFERR/RES). Dr. Hull first joined the NRC Office of Nuclear Reactor Regulation, Division of License Renewal, in 2004 as an Intergovernmental Personnel Act (IPA) assignee from Argonne National Laboratory. She joined CMB/ME/DFERR/RES as NRC staff in 2006. Dr. Hull began her work as a materials scientist in the Corrosion Section at ANL after completing her Ph.D. from Northwestern University in 1987. Over her ANL career, she mainly worked on projects for DOE (fusion reactor materials; radioactive materials packaging, transportation, & disposal; international technology evaluation, NNSA initiatives for proliferation prevention) and NRC (NPP aging degradation issues and license renewal). She attained her B.S. in Biochemistry/Chemistry from Iowa State University and her graduate degrees from Northwestern University (dissertation on Kinetics of Evaporite Minerals - Brine Interactions: Mathematical Modeling and Experimental Determination of the Effect of Gamma Radiation and Threshold Crystallization Inhibition on Permian Basin Brine Composition).
