

Session Title: Insights and Topics from Siting Safety and Environmental Reviews

Description: The NRC has completed three early site permits (ESPs) and, in the last year, initiated the review of 17 combined license (COL) applications. From these reviews, the NRC staff and industry have gained valuable insights that could potentially increase the efficiency of ongoing and future reviews. During this session, NRC staff and industry will offer insights on topics such as the content of an application, requests for additional information, and other key process and technical issues that have affected COL and ESP siting and environmental reviews. By sharing such information, the NRC hopes to create an environment where industry and the NRC staff can learn from each other and lessons learned can be incorporated into future applications.

Session Chairs: Scott Flanders, NRC/NRO, and Nilesh Chokshi, NRC/NRO

Panelists:

Lessons Learned from Site Safety Reviews

Presentation View Handout View

Michelle Hart, NRC/NRO

USACE Regulatory Program

Presentation View Handout View

Kimberly McLaughlin, Regulatory Program Manager, US Army Corps of Engineers

Industry Perspectives on Environmental Reviews

Presentation View Handout View

Tom Moorer, Environmental Manager, Southern Company

Plant Parameter Envelope ESP

Presentation View Handout View

Jeff Pantazes, Environmental Manager, Nuclear Development, PSEG Power, LLC

Session Coordinator: Carolyn Lauron, NRC/NRO, tel: (301) 415-2736, E-mail:
