

John England, Jr.

Dr. John F. England, Jr. is a hydraulic engineer with the Bureau of Reclamation in Denver, Colorado, USA. Dr. England's research and project interests include extreme flood understanding and prediction, rainfall-runoff modeling, flood frequency, hydrometeorology, paleoflood hydrology, and risk analysis. For the past 12 years he has developed and applied probabilistic flood techniques to evaluate the risk and safety of Bureau of Reclamation dams, and has overseen implementation of risk-based techniques for the dam safety program. Dr. England received his M.S. and Ph.D. in hydrology and water resources from Colorado State University. He is a registered Professional Hydrologist with the American Institute of Hydrology, and a registered Professional Engineer in Colorado.
