

Paul Leonard

Paul Leonard has 29 years of commercial nuclear power plant experience of which 25 years have been at the Donald C. Cook Nuclear Plant. This followed his service in the U.S. Navy Nuclear Power program. While at the Donald C. Cook Nuclear Plant, Mr. Leonard achieved SRO certification and provided training to the Operations staff for many years. For the last 12 years, Mr. Leonard has held several positions within the Engineering group and was most recently the Engineering Manager DSI - 191 Issue Resolution Project. Mr. Leonard has also remained actively involved with the NEI Sump Performance Task Force during the resolution of the DSI -191 issue. Currently, he is the Supervisor - Project Engineering, with responsibility for ensuring the engineering associated with major projects is performed in the manner to integrate with and maintain the engineering design basis for D. C. Cook.
