

TH29 Construction Inspection Program

A comprehensive update on regulatory activities will be presented in the areas of construction and vendor inspection program development and implementation, including: revised manual chapters and procedures; the latest initiatives in inspection planning and scheduling; inspection documentation guidance; verification and closure of Inspections, Tests, Analyses, and Acceptance Criteria (ITAAC) and related documentation; engineering design verification inspections; corrective action programs; and enhancements to the performance assessment program. Insights from current domestic and international construction experience, as well as ongoing industry initiatives will be incorporated into the discussions. Presentations will provide the latest perspectives on NRC oversight, licensee activities and regulatory interactions throughout the new reactor design, manufacturing, fabrication, and offsite and onsite construction processes to the 10CFR52 .103(g) finding.

Session Co-Chairs: Glenn Tracy, Director, Division of Construction, Inspection, and Operational Programs, NRC/NRO

Richard Croteau, Director, Division of Construction Projects, NRC/Region II
