Radiological Risk and Emergency
Communications

Draft NUREG/CR-XXXX

Copyright Dr. V. Covello, Center for Change/Risk Communication

2

Project Objective

“To conduct a comprehensive review of the
research and practitioner literature on
best practice in *radiation risk and*
emergency communication.”

Copyright Dr. V. Covello, Center for Change/Risk Communication

3

Definition

Risk: “a threat of loss, real or perceived, to that which we value.”

Copyright Dr. V. Covello, Center for Change/Risk Communication

4

Definition

Risk: “a threat of loss, real or perceived, to that which we value.”

Risk Communication: “the exchange of information about risks.”

Copyright Dr. V. Covello, Center for Change/Risk Communication

5

Risk Communication Goals

- Enhance knowledge and understanding
- Build trust and credibility
- Encourage appropriate attitudes, behaviors and beliefs

Copyright Dr. V. Covello, Center for Change/Risk Communication

6

USNRC
United States Nuclear Regulatory Commission
Protecting People and the Environment

Risk Communication: Key Messages

- Risk communication is a science-based discipline
- High concern situations change the rules of communication
- The key to risk communication success is anticipation, preparation, and practice

Copyright Dr. V. Covello, Center for Change/Risk Communication 7

USNRC
United States Nuclear Regulatory Commission
Protecting People and the Environment

Risk Communication: Key Messages

- Risk communication is a **science-based discipline**
- High concern situations change the rules of communication
- The key to risk communication success is anticipation, preparation, and practice

Copyright Dr. V. Covello, Center for Change/Risk Communication 8

USNRC

Protecting People and the Environment

Risk Communication Literature

- 8000 Articles in Peer Reviewed Scientific Journals
- 2000 Books

Copyright Dr. V. Covello, Center for Change/Risk Communication 9

Risk Communication Literature: Example

Dr. R. Hyer and Dr. V. Covello

"Effective Media Communication During Public Health Emergencies: A World Health Organization Handbook"

World Health Organization, United Nations: Geneva, April 2007
(www.amazon.com or www.who.int/bookorders)

Copyright Dr. V. Covello, Center for Change/Risk Communication

10

Risk Communication Literature: Example

"The Magic Number Seven, Plus or Minus Two: Some Limits on Our Capacity for Processing Information"

George A. Miller (Department of Psychology, Princeton University)

The Psychological Review, 1956, vol. 63, pp. 81-97

Copyright Dr. V. Covello, Center for Change/Risk Communication

11

Risk Communication Literature: Example

"Five Essential Elements of Immediate and Mid-Term Mass Trauma Intervention: Empirical Evidence," Psychiatry, 70(4): 2007 Authors: Steven Hobfoll et. al.

Conclusion of Research

Provide people a sense of:

- Hope
- Self- and community efficacy
- Safety
- Calm
- Connectedness

Protecting People and the Environment

Risk Communication Theories

- Trust Determination Theory
- Mental Noise Theory

Copyright Dr. V. Covello, Center for Change/Risk Communication 15

USNRC
U.S. Nuclear Regulatory Commission
Protecting People and the Environment

Risk Communication: Core Principles

When people are concerned, stressed, or upset:

- They want to know that you care before they care what you know (Trust Determination Theory)
- Have difficulty hearing, understanding, and remembering information (Mental Noise Theory)
- Focus most on what they hear first (Mental Noise Theory)

Copyright Dr. V. Covello, Center for Change/Risk Communication 16

Protecting People and the Environment

Risk Communication: Core Principles

When people are concerned, stressed, or upset:

- They want to know that you care before they care what you know (Trust Determination Theory)
- Have difficulty hearing, understanding, and remembering information (Mental Noise Theory)
- Focus most on what they hear first (Mental Noise Theory)

Copyright Dr. V. Covello, Center for Change/Risk Communication 18

Risk Communication: Core Principles

When people are concerned, stressed, or upset:

- They often focus more on the negative than on the positive (Negative Dominance Theory)
- The gaps between risk perceptions and reality often become wider Risk Perception Theory)

Copyright Dr. V. Covello, Center for Change/Risk Communication 19

Risk Perception Theory: Fear/Outrage Factors

<u>Lower Concern / Fear</u>	<u>Higher Concern / Fear</u>
1. Trustworthy sources	Untrustworthy sources
2. Large benefits	Few or unclear benefits
3. Under one's control	Controlled by others
4. Voluntary	Involuntary
5. Fair	Unfair
6. Natural origin	Human origin
7. Children not victims	Children as victims

Copyright Dr. V. Covello, Center for Change/Risk Communication 20

Risk Perception Theory: Fear/Outrage Factors

<u>Lower Concern /</u>	<u>Higher Concern /</u>
<u>Lower Fear /</u>	<u>Higher Fear /</u>
<u>Lower Outrage</u>	<u>Higher Outrage</u>
1. Trustworthy sources	Untrustworthy sources
2. Large benefits	Few or unclear benefits
3. Under one's control	Controlled by others

41

Notification of Unusual Event

“Under this category, events are in process or have occurred which indicate potential degradation in the level of safety of the plant. No release of radioactive material requiring offsite response or monitoring is expected unless further degradation occurs.”

Source: NRC Web Site

Copyright Dr. V. Covello, Center for Change/Risk Communication

42

Notification of an Unusual Event
(revision for media and public communication)

An Unusual Event is the lowest of the four emergency levels at a nuclear power plant.

- It involves a minor problem at the plant.
- Local and state emergency organizations would be notified but not asked to respond.
- No protective actions for the public would be required.

Copyright Dr. V. Covello, Center for Change/Risk Communication 43

Risk Communication: Key Messages

- Risk communication is a science-based discipline
- High concern situations change the rules of communication
- The key to risk communication success is anticipation, preparation, and practice

Copyright Dr. V. Covello, Center for Change/Risk Communication 44

Risk Communication Strategy: 7 Steps

- 1) Identify a risk related issue or scenario
- 2) Identify key stakeholders (audiences)
- 3) Identify stakeholder questions and concerns
- 4) Develop key messages consistent with risk communication principles
- 5) Develop supporting information
- 6) Conduct testing
- 7) Plan for delivery

Message Map: What is meant by sheltering in place during a radiological emergency?

Key Message 1: Sheltering in place is a protective action which includes going indoors at your current location.

Key Message 2: People may be asked to shelter in place rather than evacuate.

Key Message 3: Staying indoors for a short time can protect people from exposure to radiation.

Copyright Dr. V. Covello, Center for Change/Risk Communication 53

What is meant by sheltering in place during a radiological emergency?

Key Message 1: Sheltering in place is a protective action which includes going indoors at your current location.

Supporting Facts

- Indoor locations include home, business, the office, school, or a shopping mall.
- Depending on the type of building, sheltering in place can result in a reduction of radiation of up to 80% compared to those who are outdoors and unsheltered.
- People who shelter in place should listen to a radio or television station for updates, close all windows and doors, close exterior vents, and turn off heating and air conditioning equipment using outside air.
