

Remote Operated Weapons System R.O.W.S.

- ## R.O.W.S
- Why advantages are there?
- Reduce Security Officer exposure
 - Force multiplier
 - Compliments a well implemented strategy
 - Environmental conditions – areas of the plant that may be hot/cold/RP concerns
 - Capital verses long term O&M costs

- ## Things to consider
- Training intensive
 - Requires very good dexterity (game controller style) (PONG generation need not apply)
 - Maintenance (good locations aren't always easily accessed)
 - Environmental conditions – Intense heat or extreme cold (Minnesota -40+)
 - Compensatory Measures – Locations and areas of coverage may be a challenge to comp
 - Cost vs. financial return on money spent – business case (may not reduce force but be able to maintain size of force for extended period of time)

R.O.W.s

- Use as technology to enhance strategy – not be dependent on
- Understand its capabilities and limitations
- Implement it for the right reasons – Security Officer survival – tool
