

## Maximizing Efficiency and Transparency in Safety Research of Accident Tolerant Fuel

Michael Case  
Director of Division of Safety Systems

---

---

---

---

---

---

---

---

## Working Together – Accident Tolerant Fuel

- Collaboration defined in two Memorandum of Understanding (MOU)
- MOUs with DOE and EPRI written to:
  - Reduce duplication of effort
  - Allow NRC to obtain data from DOE and EPRI experimental programs for independent analysis and to inform regulatory decisions
  - Increase transparency for all stakeholders
- Multiple NRC technical staff participate in DOE and EPRI led research progress meetings to maintain real-time cognizance

---

---

---

---

---

---

---

---

## Memorandum of Understanding - EPRI

- Signed October 23, 2017
- Expected areas of interaction include:
  - Cooperative efforts on expert elicitations
  - Research on deterministic ATF thermal-mechanical design criteria
  - Research to characterize the safety and risk significant characteristics of ATF as part of an integrated nuclear reactor system
- Available in ADAMS [ML17248A392](#)

---

---

---

---

---

---

---

---

## Memorandum of Understanding - DOE

- Signed October 26, 2017
- Expected areas of interaction include:
  - Testing of ATF under steady-state and transient conditions
  - Efforts to develop and validate material property correlations needed to model ATF
- Available in ADAMS [ML17130A815](#)

---

---

---

---

---

---

---

---

## Working Together – Maintaining Independence

- Data obtained in DOE and EPRI experimental programs will be used to:
  - Draw independent conclusions
  - Update the NRC’s independent analysis tools (FRAPCON/FRAPTRAN, TRACE, etc)

---

---

---

---

---

---

---

---

## Working Together – Success Story: Subsequent License Renewal

- NRC collaborated with DOE and industry:
  - Shared data
  - Drew independent conclusions
  - Completed the guidance before the first lifetime extension application arrived

---

---

---

---

---

---

---
