

cROP 2011Q2 Semiannual Performance Review Substantive Cross Cutting Issues Summary

The NRC evaluates whether a substantive cross-cutting issue exists at each reactor facility that is under construction twice a year during the semiannual performance review assessment meetings in accordance with [IMC 2505](#). If the NRC determines that a substantive cross-cutting issue exists at a given plant, the resultant semiannual performance review assessment letters summarize the specific substantive cross-cutting issue to include the necessary actions to resolve the issue. The next semiannual performance review assessment letter will either state that the issue has been satisfactorily resolved or summarize the agency's assessment and licensee's progress in addressing the issue.

"Yes" in the matrix below indicates that the plant has a open substantive cross-cutting issue in that area based on the most semiannual performance review assessment. Clicking on the "Yes" will take you directly to the assessment letter that describes the issue. "Closed" in the matrix below indicates that the plant had a substantive cross-cutting issue closed based on the last assessment. Clicking on the "Closed" will take you directly to the assessment letter that describes the issue.

Plants	Baseline Program	SCWE
Vogtle Unit 3	N/A	N/A
Vogtle Unit 4	N/A	N/A
