

## Other Topics Determined by Participants

- Compensatory measures. Group thought there should be more explanation as to what a compensatory measure is, especially when you have to transition into 50.59. Clarify a true compensatory measure versus monitoring.
- Combining the two GL attachments. Group thought that combining the two GL attachments has a lot of merit. Should also include existing guidance on hazard removal evaluations into GL 91-18. Need to be careful not to make document too cumbersome by incorporating too much guidance with too many entry points.
- Timeliness. How timely is timely? Would examples to help explain timely be worthwhile to the industry, and if it is useful would the industry be willing to provide those examples to be included?
- Evaluation of compensatory measures. Rev. 1 of the GL has sentence that now says “A licensee may decide to implement a compensatory measure as an interim step to restore operability or to otherwise enhance the capability of SSCs until the final corrective action is complete.” The group discussed the word restore and decided that clarification of the whole paragraph would be useful.
