#### Licensee Comments:

1Q/04: Following the Unit 3 scram on 01/30/2004, water entered the HPCI Steam line making the system unavailable. This was caused by an improper set point in the Feedwater Level Control System which has existed since the beginning of EPU operation until set point changes were made. This condition is a design deficiency that could not be detected through normal surveillance testing. For Unit 2, this condition existed at least from 11/07/01 until a setpoint change was made on 02/02/04, for a total of 18,937 critical hours. For Unit 3, this condition existed at least from 10/26/02 until a setpoint change was made on 02/01/04, for a total of 10,506 critical hours. A detailed model of the Feedwater Level Control system is being developed to analyze the system response both prior to and subsequent to the set point changes.
