September 1, 2009

Randall K. Edington
Executive Vice President, Nuclear
and Chief Nuclear Officer
Arizona Public Service Company
P.O. Box 52034
Phoenix, AZ 85072-2034

SUBJECT: MIDCYCLE PERFORMANCE REVIEW AND INSPECTION PLAN –
PALO VERDE NUCLEAR GENERATING STATION

Dear Mr. Edington,

On August 4, 2009 the NRC staff completed its performance review of Palo Verde Nuclear Generating Station (PVNGS) for the first half of the calendar year 2009 assessment cycle. Our technical staff reviewed performance indicators (PIs) for the most recent quarter and inspection results over the previous 12 months. The purpose of this letter is to inform you of our assessment of your safety performance during this period and our plans for future inspections at your facility.

This performance review and enclosed inspection plan do not include security information. A separate letter designated and marked as "Official Use Only—Security-Related Information," will include the security cornerstone review and resultant inspection plan.

Overall, PVNGS Units 1, 2, and 3 operated in a manner that preserved public health and safety and fully met all cornerstone objectives. Plant performance for the most recent quarter was within the Licensee Response column of the NRC's Action Matrix, based on all inspection findings being classified as having very low safety significance (Green) and all performance indicators indicating performance at a level requiring no additional NRC oversight (Green).

While plant performance for the most recent quarter is within the Licensee Response Column of the Action Matrix, there were historical safety-significant inspection findings that affected the first quarter of the annual assessment cycle. The NRC increased regulatory oversight of PVNGS based on these findings and issued a revised Confirmatory Action Letter to PVNGS on February 15, 2008. PVNGS undertook a sitewide performance improvement initiative to address the Confirmatory Action Letter items. The NRC performed five Confirmatory Action Letter follow-up inspections to determine if the improvement initiatives were effective in improving performance. On March 24, 2009, following the final Confirmatory Action Letter follow-up inspection, the NRC sent a follow-up assessment and Confirmatory Action Letter closure letter to PVNGS, stating that the improvement initiatives had resulted in improved safety performance and had established processes that, if effectively implemented, provide reasonable assurance that the performance improvements are sustainable. This letter closed substantive crosscutting issues in human performance and problem identification and resolution. This letter provided the basis for returning PVNGS to the Licensee Response Column of the Action Matrix.

The NRC will continue to closely monitor PVNGS performance to confirm that the facility is operated safely and that your performance improvements are being sustained. We plan to conduct reactor oversight process baseline inspections at your facility and, in accordance with NRC Manual Chapter 0305, we plan to perform additional inspection activities over a two-year period to monitor your improvement initiatives. The first additional inspection activity is currently planned to be conducted January 11-15, 2010.

During this assessment cycle the staff identified that there were more than 3 green inspection findings with documented crosscutting aspects in the area of problem identification and resolution involving the failure to thoroughly evaluate problems. The staff noted that PVNGS recognized the cross-cutting theme and identified corrective actions for implementation that appear appropriate. Therefore, the staff has concluded that a substantive cross-cutting issue in problem identification and resolution does not exist at this time.

The enclosed inspection plan details the inspection, less those related to physical protection scheduled through December 31, 2010. The inspection plan is provided to allow for the resolution of any scheduling conflicts and personnel availability issues well in advance of inspector arrival onsite. Routine resident inspections are not listed due to their ongoing and continuous nature. The inspections in the last nine months of the inspection plan are tentative and may be revised at the end-of-cycle review. We are also evaluating potential changes to the inspection program in the radiation safety cornerstone. Consequently, some specific inspection procedures and the inspection schedule may be revised for 2010.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

If circumstances arise which cause us to change this inspection plan, we will contact you to discuss the change as soon as possible. Please contact Michael Hay at (817) 860-8173 with any questions you may have regarding this letter or the inspection plan.

Sincerely,

Elmo E. Collins
Regional Administrator
