SUBJECT: MID-CYCLE PERFORMANCE REVIEW AND INSPECTION PLAN -
THREE MILE ISLAND STATION, UNIT 1

Dear Mr. Skolds:

On August 5, 2002, the NRC staff completed its mid-cycle plant performance assessment of Three Mile Island, Unit 1 (TMI). In accordance with NRC Inspection Manual Chapter 0305 "Operating Reactor Assessment Program," the mid-cycle review involved the participation of all technical divisions in evaluating the performance of your TMI facility for the first half of the current assessment cycle, January 1 - December 31, 2002. The purpose of this letter is to inform you of our assessment of your safety performance during this period and our plans for future inspections at your facility so that you will have an opportunity to prepare for these inspections and to inform us of any planned inspections which may conflict with your plant activities.

Plant performance for the most recent quarter was within the Licensee Response Column of the NRC's Action Matrix, based on all inspection findings being classified as having very low safety significance (Green) and all performance indicators (PIs) indicating performance at a level requiring no additional NRC oversight (Green). Therefore, we plan to conduct only baseline inspections at your facility through September 30, 2003.

In our Annual Assessment Letter dated March 4, 2002, we identified an adverse trend in the cross-cutting area of human performance. Specifically, we noted lapses in equipment monitoring and procedure adherence. During the current assessment cycle, these cross-cutting issues have been inspected through the baseline inspection program and during the biennial Problem Identification and Resolution inspection. Regarding procedural adherence, there were no additional inspection findings in this area of more than minor safety significance, and we have concluded that you have adequately addressed this cross-cutting issue. In the area of equipment monitoring, you initiated actions to improve performance; however, our inspections have continued to identify findings of very low safety significance (Green) in the mitigating systems cornerstone that had causal factors involving lapses of human performance in equipment monitoring. Examples included: an inadequate evaluation and untimely initiation of corrective actions for inoperable intake structure equipment; an instance of inappropriate inservice test acceptance criteria; and, failure to implement proper corrective actions to monitor

and maintain the auxiliary building temperature within requirements. Therefore, we conclude that this substantive cross-cutting issue continues. Our baseline inspection program will continue to emphasize monitoring your performance in this area.

The enclosed inspection plan details the inspections scheduled through September 30, 2003. The inspection plan is provided to minimize the resource impact on your staff and to allow for scheduling conflicts and personnel availability to be resolved in advance of inspector arrival onsite. Routine resident inspections are not listed due to their ongoing and continuous nature. The last six months of the inspection plan are tentative and may be revised at the end-of-cycle review meeting.

In addition, the NRC is in the process of finalizing a Temporary Instruction (TI) that will be used to review implementation of the Interim Compensatory Measures required by the Agency's Security Order to all commercial nuclear power plants dated February 25, 2002. Schedules have not yet been finalized, but it is anticipated that these inspections will begin within the next calendar quarter. Once finalized, the details will be communicated by separate correspondence.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC web site at <http://www.nrc.gov/reading-rm/adams.html> (the Electronic Reading Room).

If circumstances arise which cause us to change this inspection plan, we will contact you to discuss the change as soon as possible. Please contact John Rogge at 610-337-5146 if you have any questions regarding this letter.

Sincerely,

/RA/

A. Randolph Blough, Director
Division of Reactor Projects, Region 1
