Hints

- Radioactive materials are used at _____ institutions for education and research.
- The smallest component of an element. It contains neutrons, protons, and electrons.
- Power that is produced from physical or chemical resources. It can provide heat and light.
- A form of energy made by charged particles. It is available in homes through wall outlets.
- When an atom splits and energy is released. The energy is usually in the form of heat. This process can produce electricity.
- Radioactive materials are used for _____ purposes, such as gauges, well logging and manufacturing.
- A person who assesses the nuclear reactors and makes sure everything is working properly.
- The acronym for the agency in charge of regulating the commercial nuclear industry.
- _____ energy generates electricity through fission.
- Radioactive materials are used for _____ purposes, such as in hospitals for treatment and testing.
- Energy given off by matter. This energy is in the form of particles or electromagnetic rays or waves.
- The heart of a nuclear power plant, where nuclear fission is started and controlled.
- Measures taken to protect nuclear power plants. It includes armed guards and surveillance equipment.
- Nuclear reactor fuel that has been depleted from use.
