COMMISSION VOTING RECORD

DECISION ITEM: SECY-09-0101

TITLE: LICENSING OF A BABCOCK AND WILCOX MEDICAL
ISOTOPE PRODUCTION SYSTEM

The Commission (with all Commissioners agreeing) approved the subject paper as recorded in the Staff Requirements Memorandum (SRM) of October 9, 2009.

This Record contains a summary of voting on this matter together with the individual vote sheets, views and comments of the Commission.

A handwritten signature in black ink, appearing to read "Annette Vietti-Cook", written over a horizontal line.

Annette L. Vietti-Cook
Secretary of the Commission

Commissioner Klein's comments on SECY-09-0101, LICENSING OF A BABCOCK AND WILCOX MEDICAL ISOTOPE PRODUCTION SYSTEM

I approve the NRC staff's recommended response to Babcock and Wilcox. The staff succinctly answers several complex questions relating to the licensing of the proposed Medical Isotope Production System (MIPS).

The staff's analyses demonstrated that the existing regulations do not provide an efficient process for licensing this type of facility, as compared to the existing processes for the licensing of new nuclear power reactors under 10 CFR Part 52. Some of these key issues could be addressed through legislation, and the staff should engage other agencies, as appropriate (e.g., the Department of Energy), to develop legislative proposals that would streamline and clarify the licensing requirements for these unique facilities. One area that needs particular attention is waste stream management for storage and, ultimately, waste disposal. These legislative proposals should be provided to the Commission within 90 days of the date of the staff requirements memorandum for this Commission decision. In addition, the staff should consider an approach to rulemaking that could address the unique aspects of licensing medical isotope production facilities. This area is especially important today, due to the recent uncertainty of medical isotope availability from foreign manufacturers.

8/5/2009

Dale E. Klein
