Items of Interest
Week Ending February 10, 2006

Electric Power Research Institute (EPRI) Coating Aging Task Group & American Society of Testing and Standards (ASTM) Coating Annual Meeting

The staff attended the subject meetings held in Tampa, Florida during the week of January 30, 2006. The intent of the EPRI Task Group meeting was to discuss results from EPRI's industry survey on containment coating degradation and identify future actions necessary to understand and address the potential degradation of containment coatings. The ASTM Annual Coating Standards meeting followed the EPRI Meeting and included a breakout session intended to address coating assessment. The staff reinforced its position, at both meetings, that coating condition monitoring needs to demonstrate and ensure that the original qualification requirements continue to be met.

Meeting of the American Society of Mechanical Engineers (ASME) Board of Nuclear Codes and Standards (BNCS)

On February 1-2, 2006, the NRR staff member on the BNCS participated in the periodic meetings. The BNCS meets to discuss broad issues related to strategic planning for and the development and use of ASME nuclear codes. The NRC representative provided information relative to ongoing regulatory endorsement actions, NRC perspectives on risk-informed standards, and other regulatory activities of interest to BNCS, such as primary water stress corrosion cracking and the proposed revision to 10 CFR 50.46.

American Nuclear Society (ANS) ANS 3.2 Working Group

On February 1, 2006, the NRR staff participated in an ANS 3.2 working group meeting in Clearwater, Florida. ANS 3.2, "Administrative Controls and Quality Assurance for the Operational Phase of Nuclear Power Plants," was approved by the ANS Nuclear Facilities Standards Committee (NFSC) in November 2005. The working committee is scheduled to meet with the NFSC in June 2006 to discuss additional public comments. The standard is expected to be issued in the fall of 2006.

Advisory Committee on Reactor Safeguards (ACRS) subcommittee meeting presentation - Brunswick's license renewal application

On February 8, 2006, the NRC staff presented the results of staff's evaluation of Brunswick license renewal application to the ACRS subcommittee. Progress Energy Carolinas, Inc. submitted the renewal application for the Brunswick Steam Electric Plant on October 18, 2004. The staff has completed its safety review and determined that there are no open items or issues to be followed. The Regional Administrator's letter dated December 22, 2005, also determined that based on inspections conducted at Brunswick, the programs and activities related to license renewal have been or will be completed in substantial agreement with docketed commitments. The current schedule for the ACRS full committee meeting is May 2006, and issuance of the renewed license by June 25, 2006.

Staff Meets with NuStart Energy to discuss the Bellefonte Combined Operating License (COL)

On February 7, 2006, the NRC staff held a public meeting with NuStart to discuss the Bellefonte Combined Operating License (COL) pre-application activities. NuStart stated that it is planning to use some of the existing structures at the Bellefonte site, such as the cooling towers, intake structure, switchyard and tower. During the meeting, the NRC staff and NuStart discussed the concept of the design-centered approach, including one issue - one review - one position, and standardization of COL applications among other applicants referencing the AP1000 design. The COL application is scheduled to be submitted during the fourth quarter of 2007.

Duke Energy Corporation - Corporation Restructuring

By application dated August 5, 2005, as supplemented by letters dated September 16, November 28, and December 14, 2005, and February 6, 2006, Duke Energy Corporation requested approval of indirect license transfers that would be effected by the indirect transfer of control of Duke Energy's ownership and/or operating interests in Oconee Nuclear Station, Units 1, 2, and 3, McGuire Nuclear Station, Units 1 and 2 and Catawba Nuclear Station, Units 1 and 2.

This action is being sought as a result of a corporate merger involving the creation of a new holding company which will become the parent of the current licensee. The new holding company, to be named Duke Energy Corporation, will be created in connection with the merger of Duke Energy with Cinergy Corporation. Duke Energy, will convert its corporate form to a limited liability company (LLC) without interruption of its legal existence and be renamed Duke Power Company LLC. Duke Energy is the sole owner of the Oconee and McGuire units, a 25 percent owner of Catawba Unit 1, and a non-owner operator of Catawba Unit 2. The co-licensees of Catawba holding ownership shares of the Catawba units not held by Duke Energy will not be affected by the Duke Energy merger, and the proposed transfers will not affect their financial qualifications. Duke Energy presently operates the Catawba units for itself and other owners under operating agreements. Duke Energy's operating responsibilities under these operating agreements with the owners of Catawba will continue to be borne by the renamed Duke Power Company LLC entity.

By letter dated February 7, 2006, the NRC issued an order which approved the indirect license transfers. The order also approved conforming amendments to reflect the change in name of the licensee from Duke Energy Corporation to Duke Power Company LLC. The amendments will be issued and made effective at the time the corporate restructuring is complete. The licensee estimates completion of the corporate restructuring by April 2006.

Palisades - Plans to Remove Trisodium Phosphate from Containment

On February 2, 2006, Nuclear Management Company (NMC) met with members of the NRC staff to discuss removing trisodium phosphate (TSP) from the containment at Palisades during its spring 2006 refueling outage, or shortly thereafter. NMC plans to submit a license amendment request in March 2006 to remove the TSP from containment for one operating cycle. This will reduce the risk from the chemical effects of TSP on calcium silicate insulation in containment. TSP/calcium silicate testing at Argonne National Laboratory, as part of the resolution of Generic Safety Issue 191, "Assessment of Debris Accumulation on PWR Sump

February 10, 2006

ENCLOSURE A

Performance," has shown adverse effects on containment sumps during design-basis accidents.

Meeting with the U.S. Department of Energy (DOE) Regarding Incidental Waste Review

On February 1, 2006, staff from the Division of Waste Management and Environmental Protection hosted a public meeting with DOE at NRC Headquarters. This meeting covered a wide range of technical issues related to the current incidental waste review for the Idaho National Laboratory Tank Farm Facility. NRC is reviewing this waste determination consistent with its responsibilities under the Ronald Reagan National Defense Authorization Act of FY 2005, Section 3116.

Fission Product Burnup Credit Meeting with the Department of Energy (DOE), Electric Power Research Institute, and Oak Ridge National Laboratory (ORNL)

On February 7, 2006, staff from RES and NMSS participated in the subject meeting in Washington, DC, to discuss the status of DOE's acquisition of French fission product burnup credit data, which will be used to validate the NRC's criticality safety code. ORNL has received experimental data needed to develop a technical basis for fission product burnup credit for loading spent nuclear fuel assemblies in high-capacity casks.

Publication of NUREG/CR-6889, "Seismic Analysis of Simplified Piping Systems for the NUPEC Ultimate Strength Piping Test Program"

RES has published the subject report, which documents the collaborative efforts between the NRC and the Nuclear Power Engineering Corporation of Japan (NUPEC) under the NRC-NUPEC agreement in the area of seismic engineering research. This is one of a series of large-scale seismic testing programs of nuclear power plant structures, systems and components conducted by NUPEC which has provided enhanced understanding of seismic safety margins in current piping design codes. The research conducted under this collaborative agreement has allowed the NRC to obtain valuable seismic data from large-scale test programs that are not available anywhere else.
