Items of Interest
Week Ending May 2, 2008

GSI-191 Testing in Winterthur, Switzerland

During April 21 - 25, 2008, the Division of Component Integrity (DCI) and Division of Safety Systems staff observed Generic Safety Issue (GSI) - 191 chemical effects head loss testing at the Control Components, Inc. (CCI) laboratory in Winterthur, Switzerland. The primary objective was to observe a head loss test that included chemical precipitates as part of the debris mix. The test was conducted to support the GSI-191 activities for Salem. In addition, the staff observed a portion of the testing to support GSI-191 activities for Palo Verde. The staff presented several test observations to CCI.

Environmentally Assisted Corrosion International Meeting

During April 21 - 25, 2008, DCI staff participated in the 2008 Annual Meeting of the International Cooperative Group on Environmentally Assisted Corrosion in Bastad, Sweden. Approximately 150 researchers and regulators from 19 different countries attended the meeting. DCI staff participated in various activities, including an expert panel meeting on new resistive materials and a meeting for international materials regulators. Items of note included a discussion of dissimilar metal weld inspection findings for steam generator inlet and outlet welds, a new problem identified with chloride assisted stress corrosion cracking for stainless steel valves, identification of stress corrosion cracking from weld fabrication flaws, and results from a series of initiation testing including stainless steel materials in pressurized water reactor chemistries.

American Society of Mechanical Engineers Code Meeting

During April 21-25, 2008, DCI staff attended the American Society of Mechanical Engineers (ASME) Code meetings in Vancouver, British Columbia, Canada. The staff participated in discussions on repairing and mitigating primary water stress corrosion cracking in dissimilar metal welds. The staff also participated in the newly formed joint Section III and Section XI Task Group on New Reactors. The primary responsibility of this new Task Group is to identify technical areas where changes to the ASME code are needed, and to recommend those changes to the appropriate ASME Section. In addition, the staff participated in discussions related to the development of high density polyethylene piping fabrication, fusing and inspection requirements.

International Group on Radiation Damage Mechanisms in Pressure Vessel Steels Meeting

During April 21 - 25, 2008, DCI and Office of Nuclear Regulatory Research staff participated in the 14th meeting of the International Group on Radiation Damage Mechanisms (IGRDM). The objective of the IGRDM is to provide a forum for broad technical interaction in research on radiation damage mechanisms in reactor pressure vessel (RPV) steels. Session topics included: microstructure, environmental and metallurgical variables, micromechanics, as well as special sessions on materials defects and high fluence.

License Renewal Staff Holds Public Meeting to Discuss Metal Fatigue Analysis with Wolf Creek Nuclear Operating Corporation

On May 1, 2008, Division of License Renewal staff conducted a public meeting with representatives of Wolf Creek Nuclear Operating Corporation to discuss the status of the metal fatigue analyses related to an open item in the Wolf Creek Generating Station Safety Evaluation Report (SER) with open items, dated February 1, 2008. The licensee submitted the metal fatigue analyses in its License Renewal Application. The licensee's response to the SER open items is scheduled to be submitted by May 15, 2008.

May 2, 2008

ENCLOSURE A

Office of New Reactors (NRO)
Items of Interest
Week Ending May 2, 2008

Office of New Reactors' Participation at American Society of Mechanical Engineers Boiler Code Meetings

The staff participated in several American Society of Mechanical Engineers (ASME) Section III and Qualification for Authorized Inspection (QAI) meetings at the sub-group, subcommittee and main committee levels during the week of April 21, 2008. Specifically, the staff participated in the following committee meetings: Subcommittee on Nuclear Accreditation, QAI Subcommittee on AIA Accreditation, QAI Standards Committee, and Section III Sub-group on General Requirements (SG-GR). In addition, the staff participated in task groups on NCA-4000 Clarification (Section III), New Reactors, and Multinational Design Evaluation Program.

Vendor Inspection at Namco Controls

Between April 21 and April 25, 2008, the staff conducted an inspection at the Namco Controls facilities located in Lancaster, South Carolina. The purpose of the inspection was to verify that Namco Controls had adequately implemented their quality assurance and reporting programs consistent with the requirements of 10 CFR Part 50, Appendix B and 10 CFR Part 21, respectively. The NRC inspection focused on quality activities affecting limit switches that Namco Controls supplies as safety-related items to US utilities.

Meeting with TVA to Discuss Hydrology Review for the Bellefonte Combined License Application

On April 25, 2008, the staff held a Category I public meeting with the Tennessee Valley Authority (TVA) to discuss hydrology issues associated with the Bellefonte combined license application (COLA). The meeting focused on an April 17, 2008, paper that TVA developed to address issues that the staff had identified in its review of the probable maximum flood (PMF) analysis contained in the Bellefonte COLA. The review of the PMF analysis has been identified by the staff as being in the critical path for the Bellefonte COLA review. TVA described key points in the paper, provided a current status, and proposed actions going forward.

UniStar Response to NRC Regulatory Issue Summary 2008-01

By letter dated May 1, 2008, UniStar Nuclear Energy (UNE) provided its response to NRC Regulatory Issue Summary 2008-01, Process for Scheduling Acceptance Reviews based on Notification of Applicant Submission Dates for Early Site Permits, Combined Licenses, and Design Certifications and Process for Determining Budget Needs for Fiscal Year 2010. In its letter, UNE indicated that Union Electric Company (AmerenUE) expects to submit a complete combined license application for the proposed Callaway Plant Unit 2 which is to be located in Callaway County, Missouri, on or before August 4, 2008.

Week Ending May 2, 2008

Geologic Site Visit to Yucca Mountain

On April 24, 2008, the NRC and Center for Nuclear Waste Regulatory Analyses staff participated in a site visit to the Yucca Mountain area. Staff observed drill cores stored at the United States Department of Energy Sample Management Facility, and examined geologic characteristics of the Buckboard Mesa area on the Nevada Test Site. The visit was observed by representatives from Clark County, Nevada.

MDS Nordion and Best Theratronics Vendor Visit

On April 29, 2008, the Office of Federal and State Materials and Environmental Management Programs (FSME), conducted a vendor visit to MDS Nordion, and its successor, Best Theratronics, in Ottawa, Canada, as part of a series of visits to manufacturers of sealed sources and device products containing cesium chloride (CsCl). Both of these companies are United States NRC licensees who manufacture irradiators with large activity sources. This initiative is designed to determine the physical and chemical forms of CsCl that are currently used, the feasibility of using alternative forms of CsCl, and the use of alternative isotopes. The team was comprised of staff from FSME, the Office of Nuclear Security and Incident Response, and a representative from the Agreement State, Massachusetts.

Technical Exchange with Idaho National Laboratory on Methods for Very High Temperature Reactors (VHTR)

On April 21 through April 24, NRC staff attended a joint meeting at Idaho National Laboratory (INL) on Methods for VHTRs. The meeting covered the objectives and scope of Department of Energy funded VHTR Research and Development (R&D) activities in three major topical areas: thermal-fluids and accident analysis, fuel, and fission products transport. The emphasis of the meeting was on methods development, i.e., tools and data development for VHTR design and safety analysis with applications to the Next Generation Nuclear Plant (NGNP). A similar meeting focusing on graphite and high temperature materials R&D is scheduled at INL the week of May 5, 2008.

Limited Work Authorizations for Nuclear Power Plants: Correction (3150-AI05, 10 CFR Parts 2, 50, 51, 52, and 100)

On April 28, 2008, the Nuclear Regulatory Commission published a correction (73 FR 22786) to a final rule (72 FR 57415, October 9, 2007) that amended the Commission's regulations applicable to limited work authorizations. The document corrected erroneous language to the preamble and codified language of the final rule. The correction became effective April 28, 2008, and is retroactively applicable to November 8, 2007.

Office of Public Affairs (OPA)
Items of Interest
Week Ending May 2, 2008

OPA Received Significant Media Inquiries on the Following:

United States low-level wastes imports/exports

Vermont Yankee nuclear plant's decommissioning fund plans including dry cask storage

GE-Hitachi's uranium laser enrichment facility in Wilmington, N.C.

Atomic Safety and Licensing Board's grant order for hearing in the Crow Butte in-situ leach facility's expansion review, a uranium recovery facility in Wyoming

The Federal District Court sentencing on the Davis-Besse vessel head corrosion issue.

Other Public Affairs Items

OPA facilitated an interview with Energy Daily and OIP expanding on the subjects of the chairman's International Nuclear Regulators Association letter to International Atomic Energy Agency.

OPA regional staff assisted in numerous end-of-cycle meetings.
