Changes to the Federal Register Notice

1. To ensure that the NRC can properly oversee the implementation of the new rule, any implementation should be deferred until the Commission has approved the Regulatory Guide. The process for developing the guidance should be as transparent as possible, with successive drafts of the guidance available to all on the NRC's Web site.

The effective date of the final rule shall be 90 days following Commission approval of the Regulatory Guide. The final Regulatory Guide should be submitted to the Commission for approval.

(EDO) (SECY Suspense: 5/30/2000)

2. Since the guidance specific to Part 72 facilities is expected to be available at a later date than that for Part 50 facilities, the effective date for these sections should be separately established at 18 months from the publication of the final rule in the Federal Register. The staff shall provide the Part 72 guidance to the Commission for information.
3. The Commission disapproved the proposed enforcement criterion which would impose a Severity Level III violation for a licensee's failure to submit an amendment as required if a substantial review (based on the merits of the technical issues) is needed by the NRC before it could conclude that the licensee's actions were acceptable. Instead, the enforcement policy should consider the safety significance of the violation in question and the impact of the violation on the ability of the NRC to regulate effectively. The FRN should be revised accordingly.

1. Section 201 of the Energy Reorganization Act, 42 U.S.C. Section 5841, provides that action of the Commission shall be determined by a "majority vote of the members present."
