Equivalency Justification	18

Introduction

Do not begin the activities or complete the course in this qualification journal until you have completed the Basic Inspector Certification Journal. You may complete the General Proficiency requirements contained in Appendix B together with the Technical Proficiency requirements outlined in this journal.

Required Research and Test Reactor Inspector Training Courses:

- Non-Power Reactor Technology (G-106)
- Health Physics Technology (H-201)
- Rad-waste Management (H-202)
- Environmental Monitoring for Radioactivity (H-111)
- Respiratory Protection (H-311)
- Whole Body Counting/Internal Dosimetry (H-312)
- Physical Security Fundamentals (S-103)
- Radiological Emergency Response and Operations (H-303)
- Radiological Emergency Planning (H-306)
- Radiological Surveys in Support of Decommissioning (H-120)
- Transportation of Radioactive Materials (H-308)

Required Refresher Training: No routine refresher training has been identified for Research and Test Reactor Inspectors

**Research and Test Reactor Inspector
Individual Study Activity**

Research and Test Reactor Individual Study Activity

TOPIC: (ISA-RT-1) Research and Test Reactor Standards and Regulatory Guides

PURPOSE: The purpose of this activity is to familiarize you with research and test reactor standards and regulatory guides and to acquaint you with the information available. For some licensees, some standards provide the bases for requirements, and the inspector must be familiar with these standards. Further, inspectors must routinely evaluate and review a variety of facilities and documents to support their inspection activities. Often, the inspector will find situations where research and test reactor Standards and Regulatory Guides can provide useful guidance to successfully perform your assigned responsibilities. This individual study activity will acquaint you with the most common research and test reactor standards and regulatory guides and will help you learn how individual facilities may implement differently NRC regulations and requirements.

COMPETENCY AREA: REGULATORY FRAMEWORK

LEVEL OF EFFORT: 16 Hours

REFERENCES: See list at the end of this activity

EVALUATION CRITERIA: At the completion of this activity, you should be able to:

1. Locate the referenced Research and Test Reactor Standards and Regulatory Guides.
2. Find and explain significant features of specific guidance in following areas:
 - Organization and staffing in ANSI/ANS 15.1
 - Staff qualifications in ANSI/ANS 15.4
 - Experiment Technical Specifications and Review in ANSI/ANS 15.1, and in Regulatory Guides 2.2 and 2.4
 - ANSI/ANS 15.11
 - Administrative Controls in ANSI/ANS 15.1

3. Describe the process used to issue research and test reactor Standards.

TASKS:

1. Locate the referenced NRC Research and Test Reactor Standards and Regulatory Guides.
2. Review the table of contents of each referenced standard.
3. Review the main topic areas of each referenced Regulatory Guide.
4. Read the areas of specific guidance reference above in item 2 of evaluation criteria.
5. Discuss these areas with a qualified inspector or your supervisor.
6. Discuss with an ANSI/ANS 15 Subcommittee member the methods to develop these standards.
7. Meet with your supervisor, or the person designated to be your resource for this activity, and discuss the answers to the questions listed under Evaluation Criteria.

**Research and Test Reactor Inspector
On-the-Job Activity**

Research and Test Reactor On-the-Job Activity

TOPIC: (OJT-RT-1) Research and Test Reactor Inspection Accompaniments

PURPOSE: The purpose of this activity is to acquaint you with the general conduct of research and test reactor inspections

COMPETENCY

AREAS: INSPECTION
COMMUNICATION
FUNDAMENTAL FACILITY DESIGN AND OPERATION

Note: completion of this guide may take five or more inspections.

LEVEL

OF EFFORT: See the times listed with the referenced inspection procedure.

REFERENCES: See list at the end of this activity

EVALUATION

CRITERIA: Upon completion of the tasks, you will be asked to demonstrate your understanding of these tasks by successfully discussing the preparation, conduct, communication and documentation of the various inspection procedures. You will also be asked to discuss the methods used by licensees to implement safety programs and regulatory requirements. You will be asked to explain the facilities, equipment, processes, and activities of the areas you inspect, as well as the criteria, techniques, and mechanics of inspection. You will be asked to demonstrate a level of technical knowledge needed to adequately perform inspection activities on research and test reactors.

Some inspection procedures may not be conducted regularly, e.g., inspection procedures related to decommissioning. On completion of the tasks for any one inspection procedure, the inspector should be considered qualified to independently complete that inspection procedure.

- TASKS:**
1. Prepare and conduct inspection for each of the referenced inspection procedures at least twice under the supervision of a qualified research and test reactor inspector.
 2. During the inspection conduct, describe your observations and associated safety significance and/or compliance to regulatory requirements to your supervisor and the assigned NRC project manager, and to licensee management under the supervision of a qualified research and test reactor inspector.

3. Prepare at least one feeder to an inspection report for each of the referenced inspection procedures under the supervision of a qualified research and test reactor inspector.
4. With qualified inspectors, discuss and explore the different ways licensees implement safety programs and regulatory requirements applicable to each inspection procedure. Discuss the facilities and equipment, and the technical bases for their design. Discuss processes, and activities of the areas you inspect. Discuss the criteria, techniques, and mechanics of inspection at research and test reactors.
5. Review and discuss evaluation criteria with your supervisor and/or designated resource for this training.

DOCUMENTATION: Non-Power Proficiency Level Qualification Signature Card Item OJT-RT-1

REFERENCES:

NOTE: The allowed time to complete the inspections is based on the resource estimate in each IP. The same amount of time was allowed to prepare, and document the inspection. This time was doubled in consideration of the trainees' status. It was doubled again so that the inspection could be conducted twice for qualification.

NOTE: The following Inspection Procedures (IPs) are given by title because of pending change to the inspection program that may renumber these procedures)

Operational Inspection Procedures for Research and Test Reactors with power levels \geq 2 megawatts:

- Class I Non-Power Reactor Operator Licenses, Requalification, and Medical Activities (27 hours)
- Class I Non-Power Reactor Effluent and Environmental Monitoring (90 hours)
- Class I Non-Power Reactor Experiments (27 hours)
- Class I Non-Power Reactors Organization and Operations and Maintenance Activities (45 hours)
- Class I Non-Power Reactor Review and Audit and Design (45 hours)
- Class I Non-Power Reactor Procedures (45 hours)

- Class I Non-Power Reactor Fuel Movement (36 hours)
- Class I Non-Power Reactor Surveillance (72 hours)
- Class I Non-Power Reactor Emergency Preparedness (108 hours)
- Class I Non-Power Reactors Radiation Protection (162 hours)

Operational Inspection Procedures for Research and Test Reactors with power levels < 2 megawatts:

- Class II Research and Test Reactors (270 hours)

Inspection Procedures for Research and Test Reactor in Long-Term Shutdown Status

- Class III Research and Test Reactors (72 hours)

Inspection Procedures for Research and Test Reactors in Decommissioning Status

- Research and Test Reactor Dismantlement and Decontamination (216 hours)
- Research and Test Reactor License Termination Surveys (216 hours)

Inspection Procedures on Safeguards and Security

- Plans, Procedures, and Reviews (45 hours)
- Reports of Safeguards Events (72 hours)
- Physical Protection for Reactors with Formula Quantities of Special Nuclear Material (108 hours)
- Fixed Site Physical Protection of Special Nuclear Material of Moderate Strategic Significance (90 hours)
- Fixed Site Physical Protection of Special Nuclear Material of Low Strategic Significance (72 hours)
- Protection of Safeguards Information (27 hours)
- Material Control and Accounting - Reactors (36 hours)
- Receipt of New Fuel at Reactor Facilities (45 hours)

Inspection Procedures on Transportation

- Transportation (45 hours)
