NRC Makes Available First Subsequent License Renewal Application From Turkey Point Nuclear Power Plant

The Nuclear Regulatory Commission has made available the first-ever subsequent license renewal application, submitted by Florida Power & Light Company. FP&L has requested an additional 20 years for the already-renewed operating licenses of Turkey Point Nuclear Generating Units 3 and 4 in Homestead, Fla. [The application](#) is available for public review on the NRC website.

FP&L filed the application on Jan. 31, 2018, seeking to renew the licenses for a second time. The Turkey Point units are three-loop, pressurized water reactors located approximately 40 miles south of Miami. The NRC approved the initial license renewal in June 2002, with Unit 3 currently licensed to operate through July 19, 2032, and Unit 4 through April 10, 2033.

The NRC staff is reviewing the application. If the application is determined to be complete, the staff will docket it and publish a notice of opportunity to request an adjudicatory hearing before the NRC's Atomic Safety and Licensing Board.

Information about the license renewal process is available on the NRC [website](#). Copies of the Turkey Point subsequent license renewal application will be available at the Homestead Branch Library, 700 N. Homestead Blvd in Homestead; the South Dade Regional Library, 10750 SW 211th St. in Miami; and the Naraja Branch Library, 14850 SW 280th St. in Homestead.
