NRC to Hold Open House to Discuss 2017 Performance of Summer Nuclear Power Plant

Nuclear Regulatory Commission staff will discuss the 2017 safety performance of the Summer nuclear power plant, operated by SCE&G, during an open house on April 25 at the McCrorey-Liston School of Technology, 1978 S.C. Highway 215. The single-unit Summer plant is located near Jenkinsville, S.C., about 26 miles northwest of Columbia.

The open house will run from 6-7 p.m., and NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available to discuss its performance.

The NRC concluded that the Summer plant operated safely during 2017. At the end of the year, all inspection findings and performance indicators were green or of low safety significance. As a result, Summer remains under the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by two NRC resident inspectors and inspection specialists from the NRC Region II office in Atlanta.

The [annual assessment letter](#) for the Summer plant, as well as the [notice](#) for the open house, are available on the [NRC website](#). Current [performance information](#) is also available.
