NRC Makes Available Application to Transfer Bellefonte Construction Permits

The Nuclear Regulatory Commission has received an application from Nuclear Development LLC, to transfer the deferred construction permits for the unfinished Bellefonte Unit 1 and 2 reactors in Alabama. The [application](#) is now available for public review on the NRC website.

Nuclear Development filed the application on Nov. 13, seeking to transfer the permits from the Tennessee Valley Authority. The Bellefonte units are partially complete pressurized-water reactors located approximately six miles northeast of Scottsboro, Ala. The NRC placed the Bellefonte construction permits in [deferred status](#) in 2010.

The NRC staff is reviewing the application to determine if it has sufficient information to complete the agency's review. If the application is determined to be complete, the staff will docket it and publish a notice of opportunity to request an adjudicatory hearing before the NRC's Atomic Safety and Licensing Board. Information about the license transfer process is available on the [NRC website](#).
