NRC Schedules Open House to Discuss North Anna Nuclear Power Plant Performance

The Nuclear Regulatory Commission staff has scheduled an open house for May 2 to provide information and answer questions regarding the safety performance of the North Anna nuclear power plant, including the recent annual assessment letter covering all of 2018.

The open house will run from 5-6 p.m. at the Mineral Municipal Building, 312 Mineral Ave., Mineral, Va. NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available at the open house.

The two-unit North Anna plant, operated by Dominion Energy, is located near Mineral, approximately 40 miles northwest of Richmond.

The NRC concluded that the North Anna plant operated safely during 2018. At the end of the year, all inspection findings and performance indicators were green or of low safety significance. As a result, the two North Anna units remain under the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by the NRC resident inspectors and inspection specialists from the NRC Region II office in Atlanta.

The [annual assessment letter](#), which includes upcoming inspection plans for the plant, is available on the NRC [website](#). Current performance information for [Unit 1](#) and [Unit 2](#) is also on the website and is updated on a quarterly basis.
