NRC Names Resident Inspector at FitzPatrick Nuclear Power Plant

The Nuclear Regulatory Commission has selected Jennifer England as the new resident inspector at the James A. FitzPatrick nuclear power plant in Scriba, N.Y.

England rejoined the NRC in 2019 as a reactor engineer in the Division of Reactor Projects in the NRC's Region I Office in King of Prussia, Pa. She previously worked for the NRC as a resident inspector at the Indian Point nuclear power plant in New York.

Prior to returning to the NRC, she worked as a quality manager for several manufacturing companies on products such as pressure transducers, valves, hardware and fasteners. She also earlier worked at the Knolls Atomic Power Laboratory, where she was a nuclear plant engineer in the Naval Nuclear Power Program.

England holds a bachelor's degree in chemical engineering from Rutgers University.

Each U.S. commercial nuclear power plant has at least two NRC resident inspectors. England joins senior resident inspector Eric Miller, serving as the agency's eyes and ears at the facility, conducting inspections, monitoring significant work projects and interacting with plant workers and the public.
