NRC to Hold Virtual Meeting to Discuss Performance of the Catawba, McGuire, and Oconee Nuclear Power Plants

The Nuclear Regulatory Commission will discuss the 2020 safety performance of the Catawba, McGuire, and Oconee nuclear power plants during a virtual meeting to be held on [April 1](#).

The two-unit Catawba and three-unit Oconee plants are located in South Carolina, and the two-unit McGuire plant is in North Carolina. Duke Energy operates the three plants.

The meeting will begin at 5 p.m., Eastern time, with a presentation by the NRC staff responsible for plant inspections. Following the discussion with Duke Energy, the NRC, including the resident inspectors, will answer questions.

The public and media can access the meeting via [Teams](#). For those without access to Teams, the telephone conference number is (301) 576-2978, passcode 71391471#

NRC resident inspectors and other inspection specialists from the Region II office in Atlanta performed inspections at the three sites and determined that the Catawba, McGuire, and Oconee plants operated safely during 2020. All three plants are currently under the NRC's normal level of oversight.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or, red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

The annual assessment letters for the [Catawba plant](#), the [McGuire plant](#), and the [Oconee plant](#), which include upcoming inspection plans for the plants, are available on the NRC [website](#). Current performance information for [Catawba Unit 1](#), [Catawba Unit 2](#), [McGuire Unit 1](#), [McGuire Unit 2](#), [Oconee Unit 1](#), [Oconee Unit 2](#), and [Oconee Unit 3](#) is available and updated quarterly.
