NRC Schedules Open House to Discuss Point Beach Power Plant Performance

NAPERVILLE, Ill. — Nuclear Regulatory Commission staff will discuss the 2025 safety performance of the Point Beach nuclear plant during the Village of Denmark Board's public meeting May 11. The plant, which has two units, is in Two Rivers, Wisconsin, and is operated by NextEra Energy Point Beach.

The NRC will present its assessment during the meeting scheduled for 5-6 p.m. Central time at the Denmark Village Hall, 100 N Wall St. in Denmark. Members of the public will be able to observe the NRC's presentation and then speak directly with NRC staff after the meeting adjourns. Due to the nature of the meeting, the end time is approximate. Details can be found in the [meeting notice](#).

The NRC concluded that the Point Beach plant operated safely throughout 2025. All inspection findings and performance indicators were of very low safety significance. As a result, the plant remains under the agency's normal level of oversight, which includes thousands of hours of inspections each year.

The NRC [Reactor Oversight Process](#) uses color-coded inspection findings and performance indicators to measure plant performance.

The annual assessment [letter](#) for the Point Beach plant, Unit 1 and 2, including upcoming inspection plans, is available on the NRC website. Current performance information is available on the NRC [website](#) and updated quarterly.

The U.S. Nuclear Regulatory Commission was created as an expert, technical agency to protect public health, safety, and security, and regulate the civilian use of nuclear materials, including enabling the deployment of nuclear power for the benefit of society. Among other responsibilities, the agency issues licenses, conducts inspections, initiates and enforces regulations, and plans for incident response. The NRC is collaborating with interagency partners to implement reforms outlined in new Executive Orders and the ADVANCE Act to streamline agency activities and enhance efficiency.
